
django-elasticsearch-dsl-drf **Documentation**

Release 0.7.2

Artur Barseghyan <artur.barseghyan@gmail.com>

May 10, 2018

Contents

1 Prerequisites	3
2 Dependencies	5
3 Documentation	7
4 Main features and highlights	9
5 Installation	11
6 Quick start	13
7 Testing	15
8 Writing documentation	17
9 License	19
10 Support	21
11 Author	23
12 Project documentation	25
12.1 Quick start	25
12.1.1 Installation	27
12.1.2 Example app	28
12.1.2.1 Sample models	28
12.1.2.1.1 Required imports	28
12.1.2.1.2 Book statuses	28
12.1.2.1.3 Publisher model	29
12.1.2.1.4 Author model	30
12.1.2.1.5 Tag model	30
12.1.2.1.6 Book model	30
12.1.2.2 Admin classes	31
12.1.2.3 Create database tables	32
12.1.2.4 Fill in some data	32
12.1.2.5 Sample document	33
12.1.2.5.1 Required imports	33

12.1.2.5.2	Index definition	33
12.1.2.5.2.1	Settings	33
12.1.2.5.2.2	Document index	34
12.1.2.5.3	Custom analyzers	34
12.1.2.5.4	Document definition	34
12.1.2.6	Syncing Django’s database with Elasticsearch indexes	35
12.1.2.6.1	Full database sync	36
12.1.2.6.2	Sample partial sync (using custom signals)	36
12.1.2.6.2.1	Required imports	36
12.1.2.6.2.2	Update book index on related model change	36
12.1.2.6.2.3	Update book index on related model removal	37
12.1.2.7	Sample serializer	37
12.1.2.7.1	Required imports	38
12.1.2.7.2	Serializer definition	38
12.1.2.8	ViewSet definition	39
12.1.2.8.1	Required imports	39
12.1.2.8.2	ViewSet definition	40
12.1.2.9	URLs	42
12.1.2.9.1	Required imports	42
12.1.2.9.2	Router definition	42
12.1.2.9.3	URL patterns	42
12.1.2.10	Check what you’ve done so far	43
12.1.2.10.1	URLs	43
12.1.2.10.2	Test in browser	43
12.1.3	Development and debugging	43
12.1.3.1	Profiling tools	43
12.1.3.1.1	Installation	43
12.1.3.1.2	Configuration	44
12.1.3.2	Debugging	44
12.2	Filter usage examples	44
12.2.1	Search	45
12.2.1.1	Search in all fields	46
12.2.1.2	Search a single term on specific field	46
12.2.1.3	Search for multiple terms	46
12.2.1.4	Search for multiple terms in specific fields	46
12.2.2	Filtering	46
12.2.2.1	Supported lookups	46
12.2.2.1.1	Native	46
12.2.2.1.1.1	term	47
12.2.2.1.1.2	terms	47
12.2.2.1.1.3	range	47
12.2.2.1.1.4	exists	47
12.2.2.1.1.5	prefix	47
12.2.2.1.1.6	wildcard	47
12.2.2.1.1.7	ids	47
12.2.2.1.2	Functional	47
12.2.2.1.2.1	contains	48
12.2.2.1.2.2	in	48
12.2.2.1.2.3	gt	48
12.2.2.1.2.4	gte	48
12.2.2.1.2.5	lt	48
12.2.2.1.2.6	lte	48
12.2.2.1.2.7	startswith	48
12.2.2.1.2.8	endswith	48

	12.2.2.1.2.9	isnull	48
	12.2.2.1.2.10	exclude	48
	12.2.3	Usage examples	49
12.3		Basic usage examples	49
	12.3.1	Example app	50
	12.3.1.1	Sample models	50
	12.3.1.2	Sample document	50
	12.3.1.3	Sample serializer	51
	12.3.1.4	Sample view	52
	12.3.1.5	Usage example	53
	12.3.1.5.1	Sample queries	53
	12.3.1.5.1.1	Search	53
	12.3.1.5.1.2	Filtering	54
	12.3.1.5.1.3	Ordering	55
12.4		Advanced usage examples	55
	12.4.1	Example app	57
	12.4.1.1	Sample models	57
	12.4.1.2	Sample document	59
	12.4.1.2.1	Index definition	59
	12.4.1.2.1.1	Settings	59
	12.4.1.2.1.2	Document index	60
	12.4.1.3	Sample serializer	62
	12.4.1.4	Sample view	63
	12.4.1.5	Usage example	64
	12.4.1.5.1	Search	64
	12.4.1.5.2	Filtering	65
	12.4.1.5.3	Ordering	66
	12.4.1.6	Ids filter	67
	12.4.1.7	Faceted search	67
	12.4.1.8	Geo-spatial features	68
	12.4.1.8.1	Filtering	68
	12.4.1.8.2	Ordering	69
	12.4.1.9	Suggestions	69
	12.4.1.9.1	Completion suggesters	69
	12.4.1.9.1.1	Document definition	69
	12.4.1.9.1.2	Serializer definition	70
	12.4.1.9.1.3	ViewSet definition	71
	12.4.1.9.1.4	Sample requests/responses	72
	12.4.1.9.1.5	Suggestions on Array/List field	74
	12.4.1.9.1.6	Sample requests/responses	74
	12.4.1.9.2	Term and Phrase suggestions	75
	12.4.1.9.2.1	Document definition	75
	12.4.1.9.2.2	ViewSet definition	77
	12.4.1.9.2.3	Sample requests/responses	79
	12.4.1.9.2.4	Term	80
	12.4.1.9.2.5	Phrase	80
	12.4.1.10	Highlighting	81
	12.4.1.11	Pagination	83
	12.4.1.11.1	Page number pagination	83
	12.4.1.11.2	Limit/offset pagination	83
	12.4.1.11.3	Customisations	83
12.5		Nested fields usage examples	84
	12.5.1	Example app	85
	12.5.1.1	Sample models	85

12.5.1.2	Sample document	87
12.5.1.2.1	Index definition	87
12.5.1.2.1.1	Settings	87
12.5.1.2.1.2	Document index	88
12.5.1.3	Sample serializer	89
12.5.1.4	Sample view	90
12.5.1.5	Usage example	92
12.5.1.5.1	Sample queries	92
12.5.1.5.1.1	Search	92
12.5.1.5.1.2	Nested search	92
12.5.1.5.1.3	Sample models	92
12.5.1.5.1.4	Sample document	93
12.5.1.5.1.5	Sample view	95
12.5.1.5.1.6	Sample request	97
12.5.1.5.1.7	Filtering	97
12.5.1.5.1.8	Ordering	97
12.5.1.6	Suggestions	97
12.6	Various handy helpers	98
12.6.1	More like this	98

13	Indices and tables	167
	Python Module Index	169

Integrate Elasticsearch DSL with Django REST framework in the shortest way possible, with least efforts possible.

Package provides views, serializers, filter backends, pagination and other handy add-ons.

You are expected to use `django-elasticsearch-dsl` for defining your Elasticsearch documents.

CHAPTER 1

Prerequisites

- Django 1.8, 1.9, 1.10, 1.11 and 2.0.
- Python 2.7, 3.4, 3.5, 3.6
- Elasticsearch 2.x, 5.x

CHAPTER 2

Dependencies

- `django-elasticsearch-dsl`
- `djangoestframework`

CHAPTER 3

Documentation

Documentation is available on [Read the Docs](#).

Main features and highlights

- *Dynamic serializer for Documents.*
- *Search filter backend.*
- *Ordering filter backend.*
- *Filtering filter backend* (big variety of native- and functional- query lookups, such as gt, gte, lt, lte, endswith, contains, wildcard, exists, exclude, isnull, range, in, prefix (same as startswith), term and terms is implemented).
- *Geo-spatial filtering filter backend* (the following filters implemented: geo_distance, geo_polygon and geo_bounding_box).
- *Geo-spatial ordering filter backend* (the following filters implemented: geo_distance).
- *Faceted search filter backend.*
- *Highlight backend.*
- *Suggester filter backend.*
- *Pagination (Page number and limit/offset pagination).*
- *Ids filter backend.*

1. Install latest stable version from PyPI:

```
pip install django-elasticsearch-dsl-drf
```

or latest stable version from GitHub:

```
pip install https://github.com/barseghyanartur/django-elasticsearch-dsl-drf/  
↪archive/stable.tar.gz
```

or latest stable version from BitBucket:

```
pip install https://bitbucket.org/barseghyanartur/django-elasticsearch-dsl-drf/  
↪get/stable.tar.gz
```

2. Add `rest_framework`, `django_elasticsearch_dsl` and `django_elasticsearch_dsl_drf` to `INSTALLED_APPS`:

```
INSTALLED_APPS = (  
    # ...  
    # REST framework  
    'rest_framework',  
  
    # Django Elasticsearch integration  
    'django_elasticsearch_dsl',  
  
    # Django REST framework Elasticsearch integration (this package)  
    'django_elasticsearch_dsl_drf',  
    # ...  
)
```

CHAPTER 6

Quick start

Perhaps the easiest way to get acquainted with `django-elasticsearch-dsl-drf` is to read the *quick start tutorial*.

See it as a guide of diving into integration of Elasticsearch with Django with very low knowledge entry level.

Project is covered with tests.

To test with all supported Python/Django versions type:

```
tox
```

To test against specific environment, type:

```
tox -e py36-django110
```

To test just your working environment type:

```
./runtests.py
```

To run a single test in your working environment type:

```
./runtests.py src/django_elasticsearch_dsl_drf/tests/test_filtering.py
```

Or:

```
./manage.py test django_elasticsearch_dsl_drf.tests.test_ordering
```

It's assumed that you have all the requirements installed. If not, first install the test requirements:

```
pip install -r examples/requirements/test.txt
```

Writing documentation

Keep the following hierarchy.

```
=====  
title  
=====  
  
header  
=====  
  
sub-header  
-----  
  
sub-sub-header  
~~~~~  
  
sub-sub-sub-header  
^^^^^^  
  
sub-sub-sub-sub-header  
++++++  
  
sub-sub-sub-sub-sub-header  
*****
```

CHAPTER 9

License

GPL 2.0/LGPL 2.1

CHAPTER 10

Support

For any issues contact me at the e-mail given in the *Author* section.

CHAPTER 11

 - *Configuration*
 - * *Debugging*

12.1.1 Installation

1. Install latest stable version from PyPI:

```
pip install django-elasticsearch-dsl-drf
```

2. Add `rest_framework`, `django_elasticsearch_dsl` and `django_elasticsearch_dsl_drf` to `INSTALLED_APPS`:

```
INSTALLED_APPS = (
    # ...
    # REST framework
    'rest_framework',

    # Django Elasticsearch integration
    'django_elasticsearch_dsl',

    # Django REST framework Elasticsearch integration (this package)
    'django_elasticsearch_dsl_drf',
    # ...
)
```

3. Basic Django REST framework and `django-elasticsearch-dsl` configuration:

```
REST_FRAMEWORK = {
    'DEFAULT_AUTHENTICATION_CLASSES': (
        'rest_framework.authentication.BasicAuthentication',
        'rest_framework.authentication.SessionAuthentication',
    ),
    'DEFAULT_PAGINATION_CLASS':
        'rest_framework.pagination.PageNumberPagination',
    'PAGE_SIZE': 100,
    'ORDERING_PARAM': 'ordering',
}

# Elasticsearch configuration
```

```
ELASTICSEARCH_DSL = {
    'default': {
        'hosts': 'localhost:9200'
    },
}
```

12.1.2 Example app

To get started, let's imagine we have a simple book register with a couple of models.

- *Publisher model*: The book publisher model. Each book might have only one publisher (ForeignKey relation).
- *Author model*: The book author model. Each book might have unlimited number of authors (ManyToMany relation).
- *Tag model*: The tag model. Each book might have unlimited number of tags (ManyToMany relation).
- *Book model*: The book model.

To keep things separate, our Django models will reside in the `books` app. Elasticsearch documents and Django REST framework views will be defined in a `search_indexes` app. Both of the apps should be added to the `INSTALLED_APPS`.

```
INSTALLED_APPS = (
    # ...
    'books', # Books application
    'search_indexes', # Elasticsearch integration with the Django
                    # REST framework
    # ...
)
```

12.1.2.1 Sample models

Content of the `books/models.py` file. Additionally, see the code comments.

12.1.2.1.1 Required imports

Imports required for model definition.

books/models/book.py

```
import json

from django.conf import settings
from django.db import models
from django.utils.translation import ugettext, ugettext_lazy as _

from six import python_2_unicode_compatible
```

12.1.2.1.2 Book statuses

books/models/book.py

```

# States indicate the publishing status of the book. Publishing might
# be in-progress, not yet published, published, rejected, etc.
BOOK_PUBLISHING_STATUS_PUBLISHED = 'published'
BOOK_PUBLISHING_STATUS_NOT_PUBLISHED = 'not_published'
BOOK_PUBLISHING_STATUS_IN_PROGRESS = 'in_progress'
BOOK_PUBLISHING_STATUS_CANCELLED = 'cancelled'
BOOK_PUBLISHING_STATUS_REJECTED = 'rejected'
BOOK_PUBLISHING_STATUS_CHOICES = (
    (BOOK_PUBLISHING_STATUS_PUBLISHED, "Published"),
    (BOOK_PUBLISHING_STATUS_NOT_PUBLISHED, "Not published"),
    (BOOK_PUBLISHING_STATUS_IN_PROGRESS, "In progress"),
    (BOOK_PUBLISHING_STATUS_CANCELLED, "Cancelled"),
    (BOOK_PUBLISHING_STATUS_REJECTED, "Rejected"),
)
BOOK_PUBLISHING_STATUS_DEFAULT = BOOK_PUBLISHING_STATUS_PUBLISHED

```

12.1.2.1.3 Publisher model

books/models/book.py

```

@python_2_unicode_compatible
class Publisher(models.Model):
    """Publisher."""

    name = models.CharField(max_length=30)
    address = models.CharField(max_length=50)
    city = models.CharField(max_length=60)
    state_province = models.CharField(max_length=30)
    country = models.CharField(max_length=50)
    website = models.URLField()
    latitude = models.DecimalField(null=True,
                                   blank=True,
                                   decimal_places=15,

# The only publisher information we're going to need in our document
# is the publisher name. Since publisher isn't a required field,
# we define a property on a model level to avoid indexing errors on
# non-existing relation.
@property
def publisher_indexing(self):
    """Publisher for indexing.

    Used in Elasticsearch indexing.
    """
    if self.publisher is not None:
        return self.publisher.name

# As of tags, again, we only need a flat list of tag names, on which
# we can filter. Therefore, we define a property on a model level,
# which will return a JSON dumped list of tags relevant to the
# current book model object.
@property
def tags_indexing(self):
    """Tags for indexing.

    Used in Elasticsearch indexing.
    """
    return [tag.title for tag in self.tags.all()]

```

12.1.2.2 Admin classes

This is just trivial. A couple of correspondent admin classes in order to be able to fill some data.

books/admin.py

```
from django.contrib import admin
```

```
from .models import *

@admin.register(Book)
class BookAdmin(admin.ModelAdmin):
    """Book admin."""

    list_display = ('title', 'isbn', 'price', 'publication_date')
    search_fields = ('title',)
    filter_horizontal = ('authors', 'tags',)

@admin.register(Author)
class AuthorAdmin(admin.ModelAdmin):
    """Author admin."""

    list_display = ('name', 'email',)
    search_fields = ('name',)

@admin.register(Publisher)
class PublisherAdmin(admin.ModelAdmin):
    """Publisher admin."""

    list_display = ('name',)
    search_fields = ('name',)

@admin.register(Tag)
class TagAdmin(admin.ModelAdmin):
    """Tag admin."""

    list_display = ('title',)
    search_fields = ('title',)
```

12.1.2.3 Create database tables

For now, just run the migrations to create the database tables.

```
./manage.py makemigrations books
./manage.py migrate books
```

12.1.2.4 Fill in some data

If you have followed the instructions, you should now be able to log into the Django admin and create a dozen of Book/Author/Publisher/Tag records in admin.

```
http://localhost:8000/admin/books/publisher/
http://localhost:8000/admin/books/author/
http://localhost:8000/admin/books/tag/
http://localhost:8000/admin/books/book/
```

Once you've done that, proceed to the next step.

12.1.2.5 Sample document

In Elasticsearch, a document is a basic unit of information that can be indexed. For example, you can have a document for a single customer, another document for a single product, and yet another for a single order. This document is expressed in JSON (JavaScript Object Notation) which is an ubiquitous internet data interchange format.

Within an index/type, you can store as many documents as you want. Note that although a document physically resides in an index, a document actually must be indexed/assigned to a type inside an index.

Simply said, you could see an Elasticsearch index as a database and a document as a database table (which makes a Document definition in Elasticsearch DSL similar to a Django Model definition).

Often, complex SQL model structures are flattened in Elasticsearch indexes/documents. Nested relations are denormalized.

In our example, all 4 models (Author, Publisher, Tag, Book) would be flattened into a single `BookDocument`, which would hold all the required information.

Content of the `search_indexes/documents/book.py` file. Additionally, see the code comments.

12.1.2.5.1 Required imports

search_indexes/documents/book.py

```
from django.conf import settings
from django_elasticsearch_dsl import DocType, Index, fields
from elasticsearch_dsl import analyzer

from books.models import Book
```

12.1.2.5.2 Index definition

To separate dev/test/staging/production indexes, the following approach is recommended.

12.1.2.5.2.1 Settings

settings/base.py

```
# Name of the Elasticsearch index
ELASTICSEARCH_INDEX_NAMES = {
    'search_indexes.documents.book': 'book',
    'search_indexes.documents.publisher': 'publisher',
}
```

settings/testing.py

```
# Name of the Elasticsearch index
ELASTICSEARCH_INDEX_NAMES = {
    'search_indexes.documents.book': 'test_book',
    'search_indexes.documents.publisher': 'test_publisher',
}
```

settings/production.py

```
# Name of the Elasticsearch index
ELASTICSEARCH_INDEX_NAMES = {
    'search_indexes.documents.book': 'prod_book',
    'search_indexes.documents.publisher': 'prod_publisher',
}
```

12.1.2.5.2 Document index

search_indexes/documents/books.py

```
# Name of the Elasticsearch index
INDEX = Index(settings.ELASTICSEARCH_INDEX_NAMES[__name__])

# See Elasticsearch Indices API reference for available settings
INDEX.settings(
    number_of_shards=1,
    number_of_replicas=1
)
```

12.1.2.5.3 Custom analyzers

```
html_strip = analyzer(
    'html_strip',
    tokenizer="standard",
    filter=["standard", "lowercase", "stop", "snowball"],
    char_filter=["html_strip"]
)
```

12.1.2.5.4 Document definition

search_indexes/documents/book.py

```
@INDEX.doc_type
class BookDocument (DocType):
    """Book Elasticsearch document."""

    id = fields.IntegerField(attr='id')

    title = fields.StringField(
        analyzer=html_strip,
        fields={
            'raw': fields.StringField(analyzer='keyword'),
        }
    )

    description = fields.StringField(
        analyzer=html_strip,
        fields={
            'raw': fields.StringField(analyzer='keyword'),
        }
    )
```

```

summary = fields.StringField(
    analyzer=html_strip,
    fields={
        'raw': fields.StringField(analyzer='keyword'),
    }
)

publisher = fields.StringField(
    attr='publisher_indexing',
    analyzer=html_strip,
    fields={
        'raw': fields.StringField(analyzer='keyword'),
    }
)

publication_date = fields.DateField()

state = fields.StringField(
    analyzer=html_strip,
    fields={
        'raw': fields.StringField(analyzer='keyword'),
    }
)

isbn = fields.StringField(
    analyzer=html_strip,
    fields={
        'raw': fields.StringField(analyzer='keyword'),
    }
)

price = fields.FloatField()

pages = fields.IntegerField()

stock_count = fields.IntegerField()

tags = fields.StringField(
    attr='tags_indexing',
    analyzer=html_strip,
    fields={
        'raw': fields.StringField(analyzer='keyword', multi=True),
        'suggest': fields.CompletionField(multi=True),
    },
    multi=True
)

class Meta(object):
    """Meta options."""

    model = Book # The model associate with this DocType

```

12.1.2.6 Syncing Django's database with Elasticsearch indexes

So far, we have a couple of Django models and a single (decentralized) Elasticsearch index/document (Book).

12.1.2.6.1 Full database sync

The excellent `django-elasticsearch-dsl` library makes a good job of keeping the Book index fresh. It makes use of signals, so whenever the Book model is changed, the correspondent BookDocument indexes would be updated.

To simply run the full sync between Django's database and Elasticsearch, do as follows:

1. Create Elasticsearch indexes:

```
./manage.py search_index --create -f
```

2. Sync the data:

```
./manage.py search_index --populate -f
```

However, in case if a Tag, Publisher or Author models change, the Book index would not be automatically updated.

12.1.2.6.2 Sample partial sync (using custom signals)

In order to keep indexes fresh, you will have to write a couple of simple lines of code (using Django's signals). Whenever a change is made to any of the Tag, Publisher or Author models, we're going to update the correspondent BookDocument index.

12.1.2.6.2.1 Required imports

search_indexes/signals.py

```
from django.db.models.signals import post_save, post_delete
from django.dispatch import receiver

from django_elasticsearch_dsl.registries import registry
```

12.1.2.6.2.2 Update book index on related model change

search_indexes/signals.py

```
@receiver(post_save)
def update_document(sender, **kwargs):
    """Update document on added/changed records.

    Update Book document index if related `books.Publisher` (`publisher`),
    `books.Author` (`authors`), `books.Tag` (`tags`) fields have been updated
    in the database.
    """
    app_label = sender._meta.app_label
    model_name = sender._meta.model_name
    instance = kwargs['instance']

    if app_label == 'book':
        # If it is `books.Publisher` that is being updated.
        if model_name == 'publisher':
            instances = instance.books.all()
            for _instance in instances:
                registry.update(_instance)
```

```

# If it is `books.Author` that is being updated.
if model_name == 'author':
    instances = instance.books.all()
    for _instance in instances:
        registry.update(_instance)

# If it is `books.Tag` that is being updated.
if model_name == 'tag':
    instances = instance.books.all()
    for _instance in instances:
        registry.update(_instance)

```

12.1.2.6.2.3 Update book index on related model removal

search_indexes/signals.py

```

@receiver(post_delete)
def delete_document(sender, **kwargs):
    """Update document on deleted records.

    Updates Book document from index if related `books.Publisher`
    (`publisher`), `books.Author` (`authors`), `books.Tag` (`tags`) fields
    have been removed from database.
    """
    app_label = sender._meta.app_label
    model_name = sender._meta.model_name
    instance = kwargs['instance']

    if app_label == 'books':
        # If it is `books.Publisher` that is being updated.
        if model_name == 'publisher':
            instances = instance.books.all()
            for _instance in instances:
                registry.update(_instance)
                # registry.delete(_instance, raise_on_error=False)

        # If it is `books.Author` that is being updated.
        if model_name == 'author':
            instances = instance.books.all()
            for _instance in instances:
                registry.update(_instance)
                # registry.delete(_instance, raise_on_error=False)

        # If it is `books.Tag` that is being updated.
        if model_name == 'tag':
            instances = instance.books.all()
            for _instance in instances:
                registry.update(_instance)
                # registry.delete(_instance, raise_on_error=False)

```

12.1.2.7 Sample serializer

At this step we're going to define a serializer to be used in the Django REST framework ViewSet.

Content of the `search_indexes/serializers.py` file. Additionally, see the code comments.

12.1.2.7.1 Required imports

`search_indexes/serializers/book.py`

```
import json

from rest_framework import serializers
from django_elasticsearch_dsl_drf.serializers import DocumentSerializer

from .documents import BookDocument
```

12.1.2.7.2 Serializer definition

Simplest way to create a serializer, is to just specify which fields are needed to be serialized and leave it further to the dynamic serializer.

`search_indexes/serializers/book.py`

```
class BookDocumentSerializer(DocumentSerializer):
    """Serializer for the Book document."""

    class Meta(object):
        """Meta options."""

        # Specify the correspondent document class
        document = BookDocument

        # List the serializer fields. Note, that the order of the fields
        # is preserved in the ViewSet.
        fields = (
            'id',
            'title',
            'description',
            'summary',
            'publisher',
            'publication_date',
            'state',
            'isbn',
            'price',
            'pages',
            'stock_count',
            'tags',
        )
```

However, if dynamic serializer doesn't work for your or you want to customize too many things, you are free to use standard `Serializer` class of the Django REST framework.

`search_indexes/serializers/book.py`

```
class BookDocumentSerializer(serializers.Serializer):
    """Serializer for the Book document."""

    id = serializers.IntegerField(read_only=True)
```

```

title = serializers.CharField(read_only=True)
description = serializers.CharField(read_only=True)
summary = serializers.CharField(read_only=True)

publisher = serializers.CharField(read_only=True)
publication_date = serializers.DateField(read_only=True)
state = serializers.CharField(read_only=True)
isbn = serializers.CharField(read_only=True)
price = serializers.FloatField(read_only=True)
pages = serializers.IntegerField(read_only=True)
stock_count = serializers.IntegerField(read_only=True)
tags = serializers.SerializerMethodField()

class Meta(object):
    """Meta options."""

    # List the serializer fields. Note, that the order of the fields
    # is preserved in the ViewSet.
    fields = (
        'id',
        'title',
        'description',
        'summary',
        'publisher',
        'publication_date',
        'state',
        'isbn',
        'price',
        'pages',
        'stock_count',
        'tags',
    )

    def get_tags(self, obj):
        """Get tags."""
        if obj.tags:
            return list(obj.tags)
        else:
            return []

```

12.1.2.8 ViewSet definition

At this step, we're going to define Django REST framework ViewSets.

Content of the `search_indexes/viewsets.py` file. Additionally, see the code comments.

12.1.2.8.1 Required imports

`search_indexes/viewsets/book.py`

```

from django_elasticsearch_dsl_drf.constants import (
    LOOKUP_FILTER_TERMS,
    LOOKUP_FILTER_RANGE,
    LOOKUP_FILTER_PREFIX,
    LOOKUP_FILTER_WILDCARD,

```

```

LOOKUP_QUERY_IN,
LOOKUP_QUERY_GT,
LOOKUP_QUERY_GTE,
LOOKUP_QUERY_LT,
LOOKUP_QUERY_LTE,
LOOKUP_QUERY_EXCLUDE,
)
from django_elasticsearch_dsl_drf.filter_backends import (
    FilteringFilterBackend,
    IdsFilterBackend,
    OrderingFilterBackend,
    DefaultOrderingFilterBackend,
    SearchFilterBackend,
)
from django_elasticsearch_dsl_drf.views import BaseDocumentViewSet

from .documents import BookDocument, PublisherDocument
from .serializers import BookDocumentSerializer

```

12.1.2.8.2 ViewSet definition

search_indexes/viewsets/book.py

```

class BookDocumentView(BaseDocumentViewSet):
    """The BookDocument view."""

    document = BookDocument
    serializer_class = BookDocumentSerializer
    lookup_field = 'id'
    filter_backends = [
        FilteringFilterBackend,
        IdsFilterBackend,
        OrderingFilterBackend,
        DefaultOrderingFilterBackend,
        SearchFilterBackend,
    ]
    # Define search fields
    search_fields = (
        'title',
        'description',
        'summary',
    )
    # Define filter fields
    filter_fields = {
        'id': {
            'field': 'id',
            # Note, that we limit the lookups of id field in this example,
            # to `range`, `in`, `gt`, `gte`, `lt` and `lte` filters.
            'lookups': [
                LOOKUP_FILTER_RANGE,
                LOOKUP_QUERY_IN,
                LOOKUP_QUERY_GT,
                LOOKUP_QUERY_GTE,
                LOOKUP_QUERY_LT,
                LOOKUP_QUERY_LTE,
            ],
        },
    }

```

```

},
'title': 'title.raw',
'publisher': 'publisher.raw',
'publication_date': 'publication_date',
'state': 'state.raw',
'isbn': 'isbn.raw',
'price': {
    'field': 'price.raw',
    # Note, that we limit the lookups of `price` field in this
    # example, to `range`, `gt`, `gte`, `lt` and `lte` filters.
    'lookups': [
        LOOKUP_FILTER_RANGE,
        LOOKUP_QUERY_GT,
        LOOKUP_QUERY_GTE,
        LOOKUP_QUERY_LT,
        LOOKUP_QUERY_LTE,
    ],
},
},
'pages': {
    'field': 'pages',
    # Note, that we limit the lookups of `pages` field in this
    # example, to `range`, `gt`, `gte`, `lt` and `lte` filters.
    'lookups': [
        LOOKUP_FILTER_RANGE,
        LOOKUP_QUERY_GT,
        LOOKUP_QUERY_GTE,
        LOOKUP_QUERY_LT,
        LOOKUP_QUERY_LTE,
    ],
},
},
'stock_count': {
    'field': 'stock_count',
    # Note, that we limit the lookups of `stock_count` field in
    # this example, to `range`, `gt`, `gte`, `lt` and `lte`
    # filters.
    'lookups': [
        LOOKUP_FILTER_RANGE,
        LOOKUP_QUERY_GT,
        LOOKUP_QUERY_GTE,
        LOOKUP_QUERY_LT,
        LOOKUP_QUERY_LTE,
    ],
},
},
'tags': {
    'field': 'tags',
    # Note, that we limit the lookups of `tags` field in
    # this example, to `terms`, `prefix`, `wildcard`, `in` and
    # `exclude` filters.
    'lookups': [
        LOOKUP_FILTER_TERMS,
        LOOKUP_FILTER_PREFIX,
        LOOKUP_FILTER_WILDCARD,
        LOOKUP_QUERY_IN,
        LOOKUP_QUERY_EXCLUDE,
    ],
},
},
'tags.raw': {
    'field': 'tags.raw',

```

```

# Note, that we limit the lookups of `tags.raw` field in
# this example, to `terms`, `prefix`, `wildcard`, `in` and
# `exclude` filters.
'lookups': [
    LOOKUP_FILTER_TERMS,
    LOOKUP_FILTER_PREFIX,
    LOOKUP_FILTER_WILDCARD,
    LOOKUP_QUERY_IN,
    LOOKUP_QUERY_EXCLUDE,
],
},
}
# Define ordering fields
ordering_fields = {
    'id': 'id',
    'title': 'title.raw',
    'price': 'price.raw',
    'state': 'state.raw',
    'publication_date': 'publication_date',
}
# Specify default ordering
ordering = ('id', 'title', 'price',)

```

12.1.2.9 URLs

At this step, we're going to define url patterns.

Content of the `search_indexes/urls.py` file. Additionally, see the code comments.

12.1.2.9.1 Required imports

search_indexes/urls.py

```

from django.conf.urls import url, include
from rest_framework_extensions.routers import ExtendedDefaultRouter

from .views import BookDocumentView

```

12.1.2.9.2 Router definition

search_indexes/urls.py

```

router = ExtendedDefaultRouter()
books = router.register(r'books',
                       BookDocumentView,
                       base_name='bookdocument')

```

12.1.2.9.3 URL patterns

search_indexes/urls.py

```
urlpatterns = [
    url(r'^$', include(router.urls)),
]
```

12.1.2.10 Check what you've done so far

At this point, you are one step away from a working example of integrating Elasticsearch DSL with Django.

12.1.2.10.1 URLs

If you didn't add the urls of the `search_indexes` example application to your project's global url patterns, make sure to do it now.

```
from django.conf.urls import include, url
from search_indexes import urls as search_index_urls

urlpatterns = [
    # ...
    # Search URLs
    url(r'^search/', include(search_index_urls)),
    # ...
]
```

12.1.2.10.2 Test in browser

Open the following URL in your browser.

```
http://localhost:8000/search/books/
```

Perform a number of lookups:

```
http://localhost:8001/search/books/?ids=54|55|56
http://localhost:8001/search/books/?summary__contains=photography
http://localhost:8001/search/books/?tags__contains=ython
http://localhost:8001/search/books/?state=published
http://localhost:8001/search/books/?pages__gt=10&pages__lt=30
```

12.1.3 Development and debugging

12.1.3.1 Profiling tools

Looking for profiling tools for Elasticsearch?

Try `django-elasticsearch-debug-toolbar` package. It's implemented as a panel for the well known Django Debug Toolbar and gives you full insights on what's happening on the side of Elasticsearch.

12.1.3.1.1 Installation

```
pip install django-debug-toolbar
pip install django-elasticsearch-debug-toolbar
```

12.1.3.1.2 Configuration

Change your development settings in the following way:

settings/dev.py

```
MIDDLEWARE_CLASSES += (
    'debug_toolbar.middleware.DebugToolbarMiddleware',
    'debug_toolbar_force.middleware.ForceDebugToolbarMiddleware',
)

INSTALLED_APPS += (
    'debug_toolbar',
    'elastic_panel',
)

DEBUG_TOOLBAR_CONFIG = {
    'INTERCEPT_REDIRECTS': False,
}

DEBUG_TOOLBAR_PANELS = (
    # Defaults
    'debug_toolbar.panels.versions.VersionsPanel',
    'debug_toolbar.panels.timer.TimerPanel',
    'debug_toolbar.panels.settings.SettingsPanel',
    'debug_toolbar.panels.headers.HeadersPanel',
    'debug_toolbar.panels.request.RequestPanel',
    'debug_toolbar.panels.sql.SQLPanel',
    'debug_toolbar.panels.staticfiles.StaticFilesPanel',
    'debug_toolbar.panels.templates.TemplatesPanel',
    'debug_toolbar.panels.cache.CachePanel',
    'debug_toolbar.panels.signals.SignalsPanel',
    'debug_toolbar.panels.logging.LoggingPanel',
    'debug_toolbar.panels.redirects.RedirectsPanel',
    # Additional
    'elastic_panel.panel.ElasticDebugPanel',
)
```

12.1.3.2 Debugging

Although (the unbeatable) Kibana is strongly recommended for data analyses, there are other good tools worth mentioning. One of them is elasticsearch-head [Elasticsearch 2.x](#) plugin or a correspondent [Chrome extension](#) of the same plugin. You may find it very useful for quick data preview or testing Elasticsearch queries.

12.2 Filter usage examples

Example usage of filtering backends.

 - *exclude*
 - *Usage examples*

12.2.1 Search

Query param name reserved for search is `search`. Make sure your models and documents do not have it as a field or attribute.

Multiple search terms are joined with `OR`.

Let's assume we have a number of `Book` items with fields `title`, `description` and `summary`.

12.2.1.1 Search in all fields

Search in all fields (name, address, city, state_province and country) for word “reilly”.

```
http://127.0.0.1:8080/search/publisher/?search=reilly
```

12.2.1.2 Search a single term on specific field

In order to search in specific field (name) for term “reilly”, add the field name separated with | to the search term.

```
http://127.0.0.1:8080/search/publisher/?search=name|reilly
```

12.2.1.3 Search for multiple terms

In order to search for multiple terms “reilly”, “bloomsbury” add multiple search query params.

```
http://127.0.0.1:8080/search/publisher/?search=reilly&search=bloomsbury
```

12.2.1.4 Search for multiple terms in specific fields

In order to search for multiple terms “reilly”, “bloomsbury” in specific fields add multiple search query params and field names separated with | to each of the search terms.

```
http://127.0.0.1:8080/search/publisher/?search=name|reilly&search=city|london
```

12.2.2 Filtering

12.2.2.1 Supported lookups

12.2.2.1.1 Native

The following native (to Elasticsearch) filters/lookups are implemented:

- *term*
- *terms*
- *range*
- *exists*
- *prefix*
- *wildcard*
- *regexp*
- *fuzzy*
- *type*
- *ids*

12.2.2.1.1.1 term

Find documents which contain the exact term specified in the field specified.

```
http://127.0.0.1:8080/search/books/?tags__term=education&tags__term=economy
```

12.2.2.1.1.2 terms

Find documents which contain any of the exact terms specified in the field specified.

12.2.2.1.1.3 range

Find documents where the field specified contains values (dates, numbers, or strings) in the range specified.

12.2.2.1.1.4 exists

Find documents where the field specified contains any non-null value.

12.2.2.1.1.5 prefix

Find documents where the field specified contains terms which begin with the exact prefix specified.

12.2.2.1.1.6 wildcard

Find documents where the field specified contains terms which match the pattern specified, where the pattern supports single character wildcards (?) and multi-character wildcards (*)

12.2.2.1.1.7 ids

Find documents with the specified type and IDs.

12.2.2.1.2 Functional

The following functional (non-native to Elasticsearch, but common in Django) filters/lookups are implemented:

- *contains*
- *in*
- *gt*
- *gte*
- *lt*
- *lte*
- *startswith*
- *endswith*

- *isnull*
- *exclude*

12.2.2.1.2.1 contains

Case-insensitive containment test.

12.2.2.1.2.2 in

In a given list.

12.2.2.1.2.3 gt

Greater than.

12.2.2.1.2.4 gte

Greater than or equal to.

12.2.2.1.2.5 lt

Less than.

12.2.2.1.2.6 lte

Less than or equal to.

12.2.2.1.2.7 startswith

Case-sensitive starts-with.

12.2.2.1.2.8 endswith

Case-sensitive ends-with.

12.2.2.1.2.9 isnull

Takes either True or False.

12.2.2.1.2.10 exclude

Returns a new query set of containing objects that do not match the given lookup parameters.

12.2.3 Usage examples

12.3.1 Example app

12.3.1.1 Sample models

books/models/publisher.py

```
class Publisher(models.Model):
    """Publisher."""

    name = models.CharField(max_length=30)
    address = models.CharField(max_length=50)
    city = models.CharField(max_length=60)
    state_province = models.CharField(max_length=30)
    country = models.CharField(max_length=50)
    website = models.URLField()
    latitude = models.DecimalField(null=True,
                                  blank=True,
                                  decimal_places=15,
                                  max_digits=19,
                                  default=0)
    longitude = models.DecimalField(null=True,
                                   blank=True,
                                   decimal_places=15,
                                   max_digits=19,
                                   default=0)

    class Meta(object):
        """Meta options."""

        ordering = ["id"]

    def __str__(self):
        return self.name

    @property
    def location_field_indexing(self):
        """Location for indexing.

        Used in Elasticsearch indexing/tests of `geo_distance` native filter.
        """
        return {
            'lat': self.latitude,
            'lon': self.longitude,
        }
```

12.3.1.2 Sample document

search_indexes/documents/publisher.py

```
from django_elasticsearch_dsl import DocType, Index, fields
from elasticsearch_dsl import analyzer

from books.models import Publisher

# Name of the Elasticsearch index
PUBLISHER_INDEX = Index('publisher')
# See Elasticsearch Indices API reference for available settings
```

```

PUBLISHER_INDEX.settings(
    number_of_shards=1,
    number_of_replicas=1
)

@PUBLISHER_INDEX.doc_type
class PublisherDocument(DocType):
    """Publisher Elasticsearch document."""

    id = fields.IntegerField(attr='id')

    name = fields.StringField(
        fields={
            'raw': fields.StringField(analyzer='keyword'),
        }
    )
    info = fields.StringField(
        fields={
            'raw': fields.StringField(analyzer='keyword'),
        }
    )
    address = fields.StringField(
        fields={
            'raw': fields.StringField(analyzer='keyword'),
        }
    )
    city = fields.StringField(
        fields={
            'raw': fields.StringField(analyzer='keyword'),
        }
    )
    state_province = fields.StringField(
        fields={
            'raw': fields.StringField(analyzer='keyword'),
        }
    )
    country = fields.StringField(
        fields={
            'raw': fields.StringField(analyzer='keyword'),
        }
    )
    website = fields.StringField()

    # Location
    location = fields.GeoPointField(attr='location_field_indexing')

    class Meta(object):
        """Meta options."""

        model = Publisher # The model associate with this DocType

```

12.3.1.3 Sample serializer

search_indexes/serializers/book.py

```

import json

from django_elasticsearch_dsl_drf.serializers import DocumentSerializer

class PublisherDocumentSerializer(DocumentSerializer):
    """Serializer for Publisher document."""

    location = serializers.SerializerMethodField()

    class Meta(object):
        """Meta options."""

        # Note, that since we're using a dynamic serializer,
        # we only have to declare fields that we want to be shown. If
        # somehow, dynamic serializer doesn't work for you, either extend
        # or declare your serializer explicitly.
        fields = (
            'id',
            'name',
            'info',
            'address',
            'city',
            'state_province',
            'country',
            'website',
        )

    def get_location(self, obj):
        """Represent location value."""
        try:
            return obj.location.to_dict()
        except:
            return {}

```

12.3.1.4 Sample view

search_indexes/views/publisher.py

```

from django_elasticsearch_dsl_drf.constants import (
    LOOKUP_FILTER_GEO_DISTANCE,
)
from django_elasticsearch_dsl_drf.filter_backends import (
    FilteringFilterBackend,
    OrderingFilterBackend,
    SearchFilterBackend,
)
from django_elasticsearch_dsl_drf.views import BaseDocumentViewSet

# Example app models
from search_indexes.documents.publisher import PublisherDocument
from search_indexes.serializers import PublisherDocumentSerializer

class PublisherDocumentView(BaseDocumentViewSet):
    """The PublisherDocument view."""

    document = PublisherDocument
    serializer_class = PublisherDocumentSerializer

```

```

lookup_field = 'id'
filter_backends = [
    FilteringFilterBackend,
    OrderingFilterBackend,
    DefaultOrderingFilterBackend,
    SearchFilterBackend,
]
# Define search fields
search_fields = (
    'name',
    'info',
    'address',
    'city',
    'state_province',
    'country',
)
# Define filtering fields
filter_fields = {
    'id': None,
    'name': 'name.raw',
    'city': 'city.raw',
    'state_province': 'state_province.raw',
    'country': 'country.raw',
}
# Define ordering fields
ordering_fields = {
    'id': None,
    'name': None,
    'city': None,
    'country': None,
}
# Specify default ordering
ordering = ('id', 'name',)
# Define geo-spatial filtering fields
geo_spatial_filter_fields = {
    'location': {
        'lookups': [
            LOOKUP_FILTER_GEO_DISTANCE,
        ],
    },
},
}

```

12.3.1.5 Usage example

Considering samples above, you should be able to perform the search, sorting and filtering actions described below.

12.3.1.5.1 Sample queries

12.3.1.5.1.1 Search

Query param name reserved for search is `search`. Make sure your models and documents do not have it as a field or attribute.

Multiple search terms are joined with OR.

Let's assume we have a number of Book items with fields `title`, `description` and `summary`.

Search in all fields

Search in all fields (`name`, `address`, `city`, `state_province` and `country`) for word "reilly".

```
http://127.0.0.1:8080/search/publisher/?search=reilly
```

Search a single term on specific field

In order to search in specific field (`name`) for term "reilly", add the field name separated with `|` to the search term.

```
http://127.0.0.1:8080/search/publisher/?search=name|reilly
```

Search for multiple terms

In order to search for multiple terms "reilly", "bloomsbury" add multiple search query params.

```
http://127.0.0.1:8080/search/publisher/?search=reilly&search=bloomsbury
```

Search for multiple terms in specific fields

In order to search for multiple terms "reilly", "bloomsbury" in specific fields add multiple search query params and field names separated with `|` to each of the search terms.

```
http://127.0.0.1:8080/search/publisher/?search=name|reilly&search=city|london
```

12.3.1.5.1.2 Filtering

Let's assume we have a number of Publisher documents with in cities (Yerevan, Groningen, Amsterdam, London).

Multiple filter terms are joined with AND.

Filter documents by single field

Filter documents by field (`city`) "yerevan".

```
http://127.0.0.1:8080/search/publisher/?city=yerevan
```

Filter documents by multiple fields

Filter documents by `city` "Yerevan" and "Groningen".

```
http://127.0.0.1:8080/search/publisher/?city__in=yerevan| groningen
```

Filter document by a single field

Filter documents by (field `country`) "Armenia".

```
http://127.0.0.1:8080/search/publisher/?country=armenia
```

Filter documents by multiple fields

Filter documents by multiple fields (field `city`) "Yerevan" and "Amsterdam" with use of functional `in` query filter.

```
http://127.0.0.1:8080/search/publisher/?city__in=yerevan| amsterdam
```

You can achieve the same effect by specifying multiple filters (`city`) "Yerevan" and "Amsterdam". Note, that in this case multiple filter terms are joined with OR.

```
http://127.0.0.1:8080/search/publisher/?city=yerevan&city=amsterdam
```

If you want the same as above, but joined with AND, add `__term` to each lookup.

```
http://127.0.0.1:8080/search/publisher/?city__term=education&city__term=economy
```

Filter documents by a word part of a single field

Filter documents by a part word part in single field (`city`) “ondon”.

```
http://127.0.0.1:8080/search/publisher/?city__wildcard=*ondon
```

Geo-distance filtering

Filter documents by radius of 100000km from the given location.

```
http://127.0.0.1:8000/search/publishers/?location__geo_distance=100000km|12.04|-63.93
```

12.3.1.5.1.3 Ordering

The `-` prefix means ordering should be descending.

Order documents by field (ascending)

Filter documents by field `city` (ascending).

```
http://127.0.0.1:8080/search/publisher/?search=country|armenia&ordering=city
```

Order documents by field (descending)

Filter documents by field `country` (descending).

```
http://127.0.0.1:8080/search/publisher/?ordering=-country
```

Order documents by multiple fields

If you want to order by multiple fields, use multiple ordering query params. In the example below, documents would be ordered first by field `country` (descending), then by field `city` (ascending).

```
http://127.0.0.1:8080/search/publisher/?ordering=-country&ordering=city
```

12.4 Advanced usage examples

    """Publisher for indexing.

    Used in Elasticsearch indexing.
    """
    if self.publisher is not None:
        return self.publisher.name

@property
def tags_indexing(self):
    """Tags for indexing.

    Used in Elasticsearch indexing.
    """
    return [tag.title for tag in self.tags.all()]

```

12.4.1.2 Sample document

12.4.1.2.1 Index definition

To separate dev/test/staging/production indexes, the following approach is recommended.

12.4.1.2.1.1 Settings

settings/base.py

```
# Name of the Elasticsearch index
ELASTICSEARCH_INDEX_NAMES = {
    'search_indexes.documents.book': 'book',
    'search_indexes.documents.publisher': 'publisher',
}
```

settings/testing.py

```
# Name of the Elasticsearch index
ELASTICSEARCH_INDEX_NAMES = {
    'search_indexes.documents.book': 'test_book',
    'search_indexes.documents.publisher': 'test_publisher',
}
```

settings/production.py

```
# Name of the Elasticsearch index
ELASTICSEARCH_INDEX_NAMES = {
    'search_indexes.documents.book': 'prod_book',
    'search_indexes.documents.publisher': 'prod_publisher',
}
```

12.4.1.2.1.2 Document index

search_indexes/documents/book.py

```
from django.conf import settings
from django_elasticsearch_dsl import DocType, Index, fields
from elasticsearch_dsl import analyzer

from books.models import Book

# Name of the Elasticsearch index
INDEX = Index(settings.ELASTICSEARCH_INDEX_NAMES[__name__])

# See Elasticsearch Indices API reference for available settings
INDEX.settings(
    number_of_shards=1,
    number_of_replicas=1
)

html_strip = analyzer(
    'html_strip',
    tokenizer="standard",
    filter=["standard", "lowercase", "stop", "snowball"],
    char_filter=["html_strip"]
)

@INDEX.doc_type
class BookDocument(DocType):
    """Book Elasticsearch document."""

    id = fields.IntegerField(attr='id')

    title = fields.StringField(
```

```

        analyzer=html_strip,
        fields={
            'raw': fields.StringField(analyzer='keyword'),
        }
    )

    description = fields.StringField(
        analyzer=html_strip,
        fields={
            'raw': fields.StringField(analyzer='keyword'),
        }
    )

    summary = fields.StringField(
        analyzer=html_strip,
        fields={
            'raw': fields.StringField(analyzer='keyword'),
        }
    )

    publisher = fields.StringField(
        attr='publisher_indexing',
        analyzer=html_strip,
        fields={
            'raw': fields.StringField(analyzer='keyword'),
        }
    )

    publication_date = fields.DateField()

    state = fields.StringField(
        analyzer=html_strip,
        fields={
            'raw': fields.StringField(analyzer='keyword'),
        }
    )

    isbn = fields.StringField(
        analyzer=html_strip,
        fields={
            'raw': fields.StringField(analyzer='keyword'),
        }
    )

    price = fields.FloatField()

    pages = fields.IntegerField()

    stock_count = fields.IntegerField()

    tags = fields.StringField(
        attr='tags_indexing',
        analyzer=html_strip,
        fields={
            'raw': fields.StringField(analyzer='keyword', multi=True),
            'suggest': fields.CompletionField(multi=True),
        },
        multi=True
    )

```

```

)

class Meta(object):
    """Meta options."""

    model = Book # The model associate with this DocType

```

12.4.1.3 Sample serializer

search_indexes/serializers/tag.py

```

import json

from rest_framework import serializers

class TagSerializer(serializers.Serializer):
    """Helper serializer for the Tag field of the Book document."""

    title = serializers.CharField()

    class Meta(object):
        """Meta options."""

        fields = ('title',)
        read_only_fields = ('title',)

```

search_indexes/serializers/book.py

```

class BookDocumentSerializer(serializers.Serializer):
    """Serializer for the Book document."""

    id = serializers.SerializerMethodField()

    title = serializers.CharField(read_only=True)
    description = serializers.CharField(read_only=True)
    summary = serializers.CharField(read_only=True)

    publisher = serializers.CharField(read_only=True)
    publication_date = serializers.DateField(read_only=True)
    state = serializers.CharField(read_only=True)
    isbn = serializers.CharField(read_only=True)
    price = serializers.FloatField(read_only=True)
    pages = serializers.IntegerField(read_only=True)
    stock_count = serializers.IntegerField(read_only=True)
    tags = serializers.SerializerMethodField()

    class Meta(object):
        """Meta options."""

        fields = (
            'id',
            'title',
            'description',
            'summary',
            'publisher',
            'publication_date',

```

```

        'state',
        'isbn',
        'price',
        'pages',
        'stock_count',
        'tags',
    )
    read_only_fields = fields

    def get_tags(self, obj):
        """Get tags."""
        if obj.tags:
            return list(obj.tags)
        else:
            return []

```

12.4.1.4 Sample view

search_indexes/viewsets/book.py

```

from django_elasticsearch_dsl_drf.constants import (
    LOOKUP_FILTER_TERMS,
    LOOKUP_FILTER_RANGE,
    LOOKUP_FILTER_PREFIX,
    LOOKUP_FILTER_WILDCARD,
    LOOKUP_QUERY_IN,
    LOOKUP_QUERY_EXCLUDE,
)
from django_elasticsearch_dsl_drf.filter_backends import (
    FilteringFilterBackend,
    OrderingFilterBackend,
    DefaultOrderingFilterBackend,
    SearchFilterBackend,
)
from django_elasticsearch_dsl_drf.views import BaseDocumentViewSet

# Example app models
from search_indexes.documents.book import BookDocument
from search_indexes.serializers import BookDocumentSerializer

class BookDocumentView(BaseDocumentViewSet):
    """The BookDocument view."""

    document = BookDocument
    serializer_class = BookDocumentSerializer
    lookup_field = 'id'
    filter_backends = [
        FilteringFilterBackend,
        OrderingFilterBackend,
        DefaultOrderingFilterBackend,
        SearchFilterBackend,
    ]
    # Define search fields
    search_fields = (
        'title',
        'summary',

```

```

        'description',
    )
    # Define filtering fields
    filter_fields = {
        'id': {
            'field': '_id',
            'lookups': [
                LOOKUP_FILTER_RANGE,
                LOOKUP_QUERY_IN,
            ],
        },
        'publisher': 'publisher.raw',
        'publication_date': 'publication_date',
        'isbn': 'isbn.raw',
        'tags': {
            'field': 'tags',
            'lookups': [
                LOOKUP_FILTER_TERMS,
                LOOKUP_FILTER_PREFIX,
                LOOKUP_FILTER_WILDCARD,
                LOOKUP_QUERY_IN,
                LOOKUP_QUERY_EXCLUDE,
            ],
        },
        'tags.raw': {
            'field': 'tags.raw',
            'lookups': [
                LOOKUP_FILTER_TERMS,
                LOOKUP_FILTER_PREFIX,
                LOOKUP_FILTER_WILDCARD,
                LOOKUP_QUERY_IN,
                LOOKUP_QUERY_EXCLUDE,
            ],
        },
    }
    # Define ordering fields
    ordering_fields = {
        'id': 'id',
        'title': 'title.raw',
        'price': 'price.raw',
        'state': 'state.raw',
        'publication_date': 'publication_date',
    }
    # Specify default ordering
    ordering = ('id', 'title',)

```

12.4.1.5 Usage example

Considering samples above, you should be able to perform the search, sorting and filtering actions described below.

12.4.1.5.1 Search

Query param name reserved for search is `search`. Make sure your models and documents do not have it as a field or attribute.

Multiple search terms are joined with OR.

Let's assume we have a number of Book items with fields `title`, `description` and `summary`.

Search in all fields

Search in all fields (`title`, `description` and `summary`) for word "education".

```
http://127.0.0.1:8080/search/books/?search=education
```

Search a single term on specific field

In order to search in specific field (`title`) for term "education", add the field name separated with `|` to the search term.

```
http://127.0.0.1:8080/search/books/?search=title|education
```

Search for multiple terms

In order to search for multiple terms "education", "technology" add multiple search query params.

```
http://127.0.0.1:8080/search/books/?search=education&search=technology
```

Search for multiple terms on specific fields

In order to search for multiple terms "education", "technology" in specific fields add multiple search query params and field names separated with `|` to each of the search terms.

```
http://127.0.0.1:8080/search/books/?search=title|education&search=summary|technology
```

Search with boosting

It's possible to boost search fields. In order to do that change the `search_fields` definition of the `BookDocumentViewSet` as follows:

```
class BookDocumentView(BaseDocumentViewSet):
    """The BookDocument view."""

    # ...

    # Define search fields
    search_fields = {
        'title': {'boost': 4},
        'summary': {'boost': 2},
        'description': None,
    }

    # Order by `_score` first.
    ordering = ('_score', 'id', 'title', 'price',)

    # ...
```

Note, that we are ordering results by `_score` first.

12.4.1.5.2 Filtering

Let's assume we have a number of Book documents with the tags (education, politics, economy, biology, climate, environment, internet, technology).

Multiple filter terms are joined with AND.

Filter documents by field

Filter documents by field (`state`) “published”.

```
http://127.0.0.1:8080/search/books/?state=published
```

Filter documents by multiple fields

Filter documents by field (`states`) “published” and “in_progress”.

```
http://127.0.0.1:8080/search/books/?state__in=published|in_progress
```

Filter document by a single field

Filter documents by (field `tag`) “education”.

```
http://127.0.0.1:8080/search/books/?tag=education
```

Filter documents by multiple fields

Filter documents by multiple fields (field `tags`) “education” and “economy” with use of functional `in` query filter.

```
http://127.0.0.1:8080/search/books/?tags__in=education|economy
```

You can achieve the same effect by specifying multiple fields (`tags`) “education” and “economy”. Note, that in this case multiple filter terms are joined with OR.

```
http://127.0.0.1:8080/search/books/?tags=education&tags=economy
```

If you want the same as above, but joined with AND, add `__term` to each lookup.

```
http://127.0.0.1:8080/search/books/?tags__term=education&tags__term=economy
```

Filter documents by a word part of a single field

Filter documents by a part word part in single field (`tags`). Word part should match both “technology” and “biology”.

```
http://127.0.0.1:8080/search/books/?tags__wildcard=*logy
```

12.4.1.5.3 Ordering

The `-` prefix means ordering should be descending.

Order documents by field (ascending)

Order documents by field `price` (ascending).

```
http://127.0.0.1:8080/search/books/?search=title|lorem&ordering=price
```

Order documents by field (descending)

Order documents by field `price` (descending).

```
http://127.0.0.1:8080/search/books/?search=title|lorem&ordering=-price
```

Order documents by multiple fields

If you want to order by multiple fields, use multiple ordering query params. In the example below, documents would be ordered first by field `publication_date` (descending), then by field `price` (ascending).

```
http://127.0.0.1:8080/search/books/?search=title|lorem&ordering=-publication_date&
↳ordering=price
```

12.4.1.6 Ids filter

Filters documents that only have the provided ids.

```
http://127.0.0.1:8000/api/articles/?ids=68|64|58
```

Or, alternatively:

```
http://127.0.0.1:8000/api/articles/?ids=68&ids=64&ids=58
```

12.4.1.7 Faceted search

In order to add faceted search support, we would have to extend our view set in the following way:

search_indexes/viewsets/book.py

```
# ...

from django_elasticsearch_dsl_drf.filter_backends import (
    # ...
    FacetedSearchFilterBackend,
)

# ...

from elasticsearch_dsl import (
    DateHistogramFacet,
    RangeFacet,
    TermsFacet,
)

# ...

class BookDocumentView(BaseDocumentViewSet):
    """The BookDocument view."""

    # ...

    filter_backends = [
        # ...
        FacetedSearchFilterBackend,
    ]

    # ...

    faceted_search_fields = {
        'state': 'state.raw', # By default, TermsFacet is used
        'publisher': {
            'field': 'publisher.raw',
            'facet': TermsFacet, # But we can define it explicitly
            'enabled': True,
        },
    },
```

```

    'publication_date': {
        'field': 'publication_date',
        'facet': DateHistogramFacet,
        'options': {
            'interval': 'year',
        }
    },
    'pages_count': {
        'field': 'pages',
        'facet': RangeFacet,
        'options': {
            'ranges': [
                ("<10", (None, 10)),
                ("11-20", (11, 20)),
                ("20-50", (20, 50)),
                (">50", (50, None)),
            ]
        }
    },
}
# ...

```

Note, that none of the facets is enabled by default, unless you explicitly specify it to be enabled. That means, that you will have to add a query string `facet={facet_field_name}` for each of the facets you want to see in results.

In the example below, we show results with faceted `state` and `pages_count` facets.

```
http://127.0.0.1:8000/search/books/?facet=state&facet=pages_count
```

12.4.1.8 Geo-spatial features

For testing the boundaries the following online services might be helpful:

- geojson.io
- [Bounding Box Tool](#)

12.4.1.8.1 Filtering

Geo-distance filtering

Filter documents by radius of 100000km from the given location.

```
http://localhost:8000/search/publishers/?location__geo_distance=100000km|12.04|-63.93
```

Geo-polygon filtering

Filter documents that are located in the given polygon.

```
http://localhost:8000/search/publishers/?location__geo_polygon=40,-70|30,-80|20,-90
```

Geo-bounding-box filtering

Filter documents that are located in the given bounding box.

```
http://localhost:8000/search/publishers/?location__geo_bounding_box=44.87,40.07|43.87,
↔41.11
```

12.4.1.8.2 Ordering

Geo-distance ordering

```
http://localhost:8000/search/publishers/?ordering=location|48.85|2.30|km|plane
```

12.4.1.9 Suggestions

The suggest feature suggests similar looking terms based on a provided text by using a suggester.

Note: The `SuggesterFilterBackend` filter backend can be used in the `suggest` custom view action/route only. Usages outside of the `are suggest` action/route are restricted.

There are three options available here: `term`, `phrase` and `completion`.

Note: Suggestion functionality is exclusive. Once you have queried the `SuggesterFilterBackend`, the latter will transform your current search query into suggestion search query (which is very different). Therefore, always add it as the very last filter backend.

12.4.1.9.1 Completion suggesters

12.4.1.9.1.1 Document definition

To make use of suggestions, you should properly index relevant fields of your documents using `fields.CompletionField`.

search_indexes/documents/publisher.py

```
from django.conf import settings

from django_elasticsearch_dsl import DocType, Index, fields

from books.models import Publisher

# Name of the Elasticsearch index
INDEX = Index(settings.ELASTICSEARCH_INDEX_NAMES[__name__])

# See Elasticsearch Indices API reference for available settings
INDEX.settings(
    number_of_shards=1,
    number_of_replicas=1
)

@INDEX.doc_type
class PublisherDocument(DocType):
```

```

"""Publisher Elasticsearch document."""

id = fields.IntegerField(attr='id')

name = fields.StringField(
    fields={
        'raw': fields.StringField(analyzer='keyword'),
        'suggest': fields.CompletionField(),
    }
)

info = fields.StringField()

address = fields.StringField(
    fields={
        'raw': fields.StringField(analyzer='keyword')
    }
)

city = fields.StringField(
    fields={
        'raw': fields.StringField(analyzer='keyword'),
        'suggest': fields.CompletionField(),
    }
)

state_province = fields.StringField(
    fields={
        'raw': fields.StringField(analyzer='keyword'),
        'suggest': fields.CompletionField(),
    }
)

country = fields.StringField(
    fields={
        'raw': fields.StringField(analyzer='keyword'),
        'suggest': fields.CompletionField(),
    }
)

website = fields.StringField()

# Location
location = fields.GeoPointField(attr='location_field_indexing')

class Meta(object):
    """Meta options."""

    model = Publisher # The model associate with this DocType

```

After that the `name.suggest`, `city.suggest`, `state_province.suggest` and `country.suggest` fields would be available for suggestions feature.

12.4.1.9.1.2 Serializer definition

This is how publisher serializer would look like.

search_indexes/serializers/publisher.py

```
import json

from django_elasticsearch_dsl_drf.serializers import DocumentSerializer

class PublisherDocumentSerializer(DocumentSerializer):
    """Serializer for Publisher document."""

    class Meta(object):
        """Meta options."""

        # Note, that since we're using a dynamic serializer,
        # we only have to declare fields that we want to be shown. If
        # somehow, dynamic serializer doesn't work for you, either extend
        # or declare your serializer explicitly.
        fields = (
            'id',
            'name',
            'info',
            'address',
            'city',
            'state_province',
            'country',
            'website',
        )
```

12.4.1.9.1.3 ViewSet definition

In order to add suggestions support, we would have to extend our view set in the following way:

search_indexes/viewsets/publisher.py

```
# ...

from django_elasticsearch_dsl_drf.constants import SUGGESTER_COMPLETION
from django_elasticsearch_dsl_drf.filter_backends import (
    # ...
    SuggesterFilterBackend,
)

# ...

class PublisherDocumentViewSet(BaseDocumentViewSet):
    """The PublisherDocument view."""

    document = PublisherDocument

    # ...

    filter_backends = [
        # ...
        SuggesterFilterBackend,
    ]

    # ...
```

```
# Suggester fields
suggester_fields = {
    'name_suggest': {
        'field': 'name.suggest',
        'suggesters': [
            SUGGESTER_COMPLETION,
        ],
    },
    'city_suggest': {
        'field': 'city.suggest',
        'suggesters': [
            SUGGESTER_COMPLETION,
        ],
    },
    'state_province_suggest': {
        'field': 'state_province.suggest',
        'suggesters': [
            SUGGESTER_COMPLETION,
        ],
    },
    'country_suggest': {
        'field': 'country.suggest',
        'suggesters': [
            SUGGESTER_COMPLETION,
        ],
    },
}

# Geo-spatial filtering fields
geo_spatial_filter_fields = {
    'location': {
        'lookups': [
            LOOKUP_FILTER_GEO_DISTANCE,
        ],
    },
}
}
```

In the example below, we show suggestion results (auto-completion) for `country` field.

12.4.1.9.1.4 Sample requests/responses

Once you have extended your view set with `SuggesterFilterBackend` functionality, you can make use of the `suggest` custom action of your view set.

Request

```
GET http://127.0.0.1:8000/search/publishers/suggest/?country_suggest__completion=Ar
```

Response

```
{
  "_shards": {
    "failed": 0,
    "successful": 1,
    "total": 1
  },
  "country_suggest__completion": [
```

```

    {
      "options": [
        {
          "score": 1.0,
          "text": "Armenia"
        },
        {
          "score": 1.0,
          "text": "Argentina"
        }
      ],
      "offset": 0,
      "length": 2,
      "text": "Ar"
    }
  ]
}

```

You can also have multiple suggesters per request.

Request

```

GET http://127.0.0.1:8000/search/publishers/suggest/?name_suggest__completion=B&
↪country_suggest__completion=Ar

```

Response

```

{
  "_shards": {
    "successful": 1,
    "total": 1,
    "failed": 0
  },
  "country_suggest__completion": [
    {
      "text": "Ar",
      "options": [
        {
          "score": 1.0,
          "text": "Armenia"
        },
        {
          "score": 1.0,
          "text": "Argentina"

12.4.1.9.1.5 Suggestions on Array/List field

Suggestions on Array/List fields (typical use case - tags, where Tag model would be a many-to-many relation to a Book model) work almost the same.

Before checking the *Sample requests/responses*, do have in mind the following:

- Book (see the *Sample models*)
- BookSerializer (see the *Sample serializer*)
- BookDocumentView (see the *Sample view*)

12.4.1.9.1.6 Sample requests/responses

Once you have extended your view set with SuggesterFilterBackend functionality, you can make use of the suggest custom action of your view set.

Request

```
GET http://127.0.0.1:8000/search/books/suggest/?tag_suggest__completion=bio
```

Response

```

{
  "_shards": {
    "failed": 0,
    "successful": 1,
    "total": 1
  },
  "country_suggest__completion": [
    {
      "options": [

```

```

        {
            "score": 1.0,
            "text": "Biography"
        },
        {
            "score": 1.0,
            "text": "Biology"
        }
    ],
    "offset": 0,
    "length": 2,
    "text": "bio"
}
]
}

```

12.4.1.9.2 Term and Phrase suggestions

While for the completion suggesters to work the `CompletionField` shall be used, the term and phrase suggesters work on common text fields.

12.4.1.9.2.1 Document definition

search_indexes/documents/book.py

```

from django.conf import settings

}
}

```

12.4.1.9.2.3 Sample requests/responses

Once you have extended your view set with `SuggesterFilterBackend` functionality, you can make use of the `suggest` custom action of your view set.

Let's considering, that one of our books has the following text in the summary:

```

Twas brillig, and the slithy toves
Did gyre and gimble in the wabe.
All mimsy were the borogoves
And the mome raths outgrabe.

"Beware the Jabberwock, my son!
The jaws that bite, the claws that catch!
Beware the Jubjub bird, and shun
The frumious Bandersnatch!"

He took his vorpal sword in his hand,
Long time the manxome foe he sought --
So rested he by the Tumtum tree,
And stood awhile in thought.

```

12.4.1.9.2.4 Term

Request

```
GET http://127.0.0.1:8000/search/books/suggest/?summary_suggest__term=tovse
```

Response

```
{
  "_shards": {
    "failed": 0,
    "total": 1,
    "successful": 1
  },
  "summary_suggest__term": [
    {
      "text": "tovs",
      "offset": 0,

        "null_field": null
    }
}

```

12.4.1.11 Pagination

12.4.1.11.1 Page number pagination

By default, the `PageNumberPagination` class is used on all view sets which inherit from `BaseDocumentViewSet`.

Example:

```

http://127.0.0.1:8000/search/books/?page=4
http://127.0.0.1:8000/search/books/?page=4&page_size=100

```

12.4.1.11.2 Limit/offset pagination

In order to use a different `pagination_class`, for instance the `LimitOffsetPagination`, specify it explicitly in the view.

search_indexes/viewsets/book.py

```

# ...

from django_elasticsearch_dsl_drf.pagination import LimitOffsetPagination

# ...

class BookDocumentView(BaseDocumentViewSet):
    """The BookDocument view."""

    # ...

    pagination_class = LimitOffsetPagination

    # ...

```

Example:

```

http://127.0.0.1:8000/search/books/?limit=100
http://127.0.0.1:8000/search/books/?offset=400&limit=100

```

12.4.1.11.3 Customisations

If you want to add additional data to the paginated response, for instance, the page size, subclass the correspondent pagination class and add your modifications in the `get_paginated_response_context` method as follows:

```

from django_elasticsearch_dsl_drf.pagination import PageNumberPagination

class CustomPageNumberPagination(PageNumberPagination):
    """Custom page number pagination."""

    def get_paginated_response_context(self, data):
        __data = super(
            CustomPageNumberPagination,
            self
        ).get_paginated_response_context(data)
        __data.append(
            ('current_page', int(self.request.query_params.get('page', 1)))
        )
        __data.append(
            ('page_size', self.get_page_size(self.request))
        )

        return sorted(__data)

```

Same applies to the customisations of the LimitOffsetPagination.

12.5 Nested fields usage examples

Advanced Django REST framework integration examples with object/nested fields.

```

12.5.1.2 Sample document

12.5.1.2.1 Index definition

To separate dev/test/staging/production indexes, the following approach is recommended.

12.5.1.2.1.1 Settings

settings/base.py

```

# Name of the Elasticsearch index
ELASTICSEARCH_INDEX_NAMES = {
    'search_indexes.documents.address': 'address',
}

```

settings/testing.py

```
# Name of the Elasticsearch index
ELASTICSEARCH_INDEX_NAMES = {
    'search_indexes.documents.address': 'test_address',
}
```

settings/production.py

```
# Name of the Elasticsearch index
ELASTICSEARCH_INDEX_NAMES = {
    'search_indexes.documents.address': 'prod_address',
}
```

12.5.1.2.1.2 Document index

search_indexes/documents/address.py

```
from django.conf import settings

from django_elasticsearch_dsl import DocType, Index, fields
from django_elasticsearch_dsl_drf.compat import KeywordField, StringField

from books.models import Address

from .analyzers import html_strip

INDEX = Index(settings.ELASTICSEARCH_INDEX_NAMES[__name__])

# See Elasticsearch Indices API reference for available settings
INDEX.settings(
    number_of_shards=1,
    number_of_replicas=1
)

@INDEX.doc_type
class AddressDocument(DocType):
    """Address Elasticsearch document."""

    # ID
    id = fields.IntegerField(attr='id')

    # *****
    # ***** Main data fields for search *****
    # *****

    street = StringField(
        analyzer=html_strip,
        fields={
            'raw': KeywordField(),
            'suggest': fields.CompletionField(),
        }
    )

    house_number = StringField(analyzer=html_strip)
```

```

appendix = StringField(analyzer=html_strip)

zip_code = StringField(
    analyzer=html_strip,
    fields={
        'raw': KeywordField(),
        'suggest': fields.CompletionField(),
    }
)

# *****
# ***** Additional fields for search and filtering *****
# *****

# City object
city = fields.ObjectField(
    properties={
        'name': StringField(
            analyzer=html_strip,
            fields={
                'raw': KeywordField(),
                'suggest': fields.CompletionField(),
            }
        ),
        'info': StringField(analyzer=html_strip),
        'location': fields.GeoPointField(attr='location_field_indexing'),
        'country': fields.ObjectField(
            properties={
                'name': StringField(
                    analyzer=html_strip,
                    fields={
                        'raw': KeywordField(),
                        'suggest': fields.CompletionField(),
                    }
                ),
                'info': StringField(analyzer=html_strip),
                'location': fields.GeoPointField(

    }
    # Define geo-spatial filtering fields
    geo_spatial_filter_fields = {
        'location': {
            'lookups': [
                LOOKUP_FILTER_GEO_BOUNDING_BOX,
                LOOKUP_FILTER_GEO_DISTANCE,
                LOOKUP_FILTER_GEO_POLYGON,
            ],
        },
    },
}
# Define ordering fields
ordering_fields = {
    'id': None,
    'street': None,
    'city': 'city.name.raw',
    'country': 'city.country.name.raw',
    'zip_code': None,
}
# Define ordering fields
geo_spatial_ordering_fields = {
    'location': None,
}
# Specify default ordering
ordering = (
    'id',
    'street.raw',
    'city.name.raw',
)

# Suggester fields
suggester_fields = {
    'street_suggest': {
        'field': 'street.suggest',
        'suggesters': [
            SUGGESTER_COMPLETION,
        ],
    },
},

```

```
'city_suggest': {
    'field': 'city.name.suggest',
    'suggesters': [
        SUGGESTER_COMPLETION,
    ],
},
'country_suggest': {
    'field': 'city.country.name.suggest',
    'suggesters': [
        SUGGESTER_COMPLETION,
    ],
}
}
```

12.5.1.5 Usage example

Considering samples above, you should be able to perform the search, sorting and filtering actions described below.

12.5.1.5.1 Sample queries

12.5.1.5.1.1 Search

Just a couple of examples, because searching in nested fields doesn't differ from searching in simple fields.

Search in all fields

Search in all fields (street, zip_code and city, country) for word "Picadilly".

```
http://127.0.0.1:8000/search/addresses/?search=Piccadilly
```

Search a single term on specific field

In order to search in specific field (country) for term "Armenia", add the field name separated with | to the search term.

```
http://127.0.0.1:8000/search/addresses/?search=city.country.name|Armenia
```

12.5.1.5.1.2 Nested search

For nested search, let's have another example.

12.5.1.5.1.3 Sample models

books/models/city.py

```
from django.db import models
from six import python_2_unicode_compatible

@python_2_unicode_compatible
class City(models.Model):
    """City."""
```

```

name = models.CharField(max_length=255)
info = models.TextField(null=True, blank=True)
country = models.ForeignKey('books.Country')
latitude = models.DecimalField(null=True,
                                blank=True,
                                decimal_places=15,
                                max_digits=19,
                                default=0)
longitude = models.DecimalField(null=True,
                                blank=True,
                                decimal_places=15,
                                max_digits=19,
                                default=0)

```

books/models/country.py

```

from django.db import models
from six import python_2_unicode_compatible

@python_2_unicode_compatible
class Country(models.Model):
    """Country."""

    name = models.CharField(max_length=255)
    info = models.TextField(null=True, blank=True)
    latitude = models.DecimalField(null=True,
                                   blank=True,
                                   decimal_places=15,
                                   max_digits=19,
                                   default=0)
    longitude = models.DecimalField(null=True,
                                    blank=True,
                                    decimal_places=15,
                                    max_digits=19,
                                    default=0)

```

12.5.1.5.1.4 Sample document

documents/city.py

```

from django.conf import settings

from django_elasticsearch_dsl import DocType, Index, fields
from django_elasticsearch_dsl_drf.compat import KeywordField, StringField

from books.models import City

from .analyzers import html_strip

INDEX = Index(settings.ELASTICSEARCH_INDEX_NAMES[__name__])

# See Elasticsearch Indices API reference for available settings
INDEX.settings(
    number_of_shards=1,
    number_of_replicas=1
)

```

```

@INDEX.doc_type
class CityDocument (DocType):
    """City Elasticsearch document.

    This document has been created purely for testing out complex fields.
    """

    # ID
    id = fields.IntegerField(attr='id')

    ordering = (
        'id',
        'name.raw',
        'country.name.raw',
    )

    # Suggester fields
    suggester_fields = {
        'name_suggest': {
            'field': 'name.suggest',
            'suggesters': [
                SUGGESTER_COMPLETION,
            ],
        },
        'country_suggest': {
            'field': 'country.name.suggest',
            'suggesters': [
                SUGGESTER_COMPLETION,
            ],
        },
    }
}
```

12.5.1.5.1.6 Sample request

Request

```
GET http://127.0.0.1:8000/search/cities/?search=Switzerland
```

12.5.1.5.1.7 Filtering

Filter documents by field

Filter documents by field (`city`) “Dublin”.

```
http://127.0.0.1:8000/search/addresses/?city=Dublin
```

Filter documents by multiple fields

Filter documents by field (`states`) “published” and “in_progress”.

```
http://127.0.0.1:8000/search/addresses/?city__in=Yerevan|Dublin
```

12.5.1.5.1.8 Ordering

The `-` prefix means ordering should be descending.

Order documents by field (descending)

Order documents by field `country` (ascending).

```
http://127.0.0.1:8000/search/addresses/?ordering=-country
```

12.5.1.6 Suggestions

The `suggest` feature suggests similar looking terms based on a provided text by using a suggester.

Note: The `SuggesterFilterBackend` filter backend can be used in the `suggest` custom view action/route only. Usages outside of the `suggest` action/route are restricted.

There are three options available here: `term`, `phrase` and `completion`.

Note: Suggestion functionality is exclusive. Once you have queried the `SuggesterFilterBackend`, the latter will transform your current search query into suggestion search query (which is very different). Therefore, always add it as the very last filter backend.

Suggest completion for field `country`.

```
http://127.0.0.1:8000/search/addresses/suggest/?country_suggest__completion=Ar
```

Suggest completion for field `city`.

```
http://127.0.0.1:8000/search/addresses/suggest/?city_suggest__completion=Ye
```

12.6 Various handy helpers

Contents:

Table of Contents

- *Various handy helpers*
 - *More like this*

12.6.1 More like this

To get more-like-this results on a random registered model, do as follows:

```
from django_elasticsearch_dsl_drf.helpers import more_like_this
from books.models import Book
book = Book.objects.first()
similar_books = more_like_this(
    book,
    ['title', 'description', 'summary']
)
```

Customize results as follows:

```
from django_elasticsearch_dsl_drf.helpers import more_like_this
from elasticsearch_dsl.query import Q
from books.models import Book
book = Book.objects.first()
query = Q('bool', must_not=Q('term', **{'state.raw': 'cancelled'}))
similar_books = more_like_this(
    book,
    query=query,
    fields=['title', 'description', 'summary'],
    min_term_freq=2,
    min_doc_freq=1,
)
```

12.7 Release history and notes

Sequence based identifiers are used for versioning (schema follows below):

```
major.minor[.revision]
```

- It's always safe to upgrade within the same minor version (for example, from 0.3 to 0.3.4).
- Minor version changes might be backwards incompatible. Read the release notes carefully before upgrading (for example, when upgrading from 0.3.4 to 0.4).
- All backwards incompatible changes are mentioned in this document.

12.7.1 0.7.2

2018-05-09

Note: Release dedicated to the Victory Day, the victims of the Second World War and Liberation of Shushi.

- Django REST framework 3.8.x support.

12.7.2 0.7.1

2018-04-04

Note: Release supported by [Goldmund](#), [Wyldebeast](#) & [Wunderliebe](#)

- Add query *boost* support for search fields.

12.7.3 0.7

2018-03-08

Note: Dear ladies, congratulations on [International Women's Day](#)

- CoreAPI/CoreSchema support.

12.7.4 0.6.4

2018-03-05

- Minor fix: explicitly use DocType in the ViewSets.

12.7.5 0.6.3

2018-01-03

- Minor fix in the search backend.
- Update the year in the license and code.

12.7.6 0.6.2

2017-12-29

- Update example project (and the tests that are dependant on the example project) to work with Django 2.0.
- Set minimal requirement for `django-elasticsearch-dsl` to 3.0.

12.7.7 0.6.1

2017-11-28

- Documentation fixes.

12.7.8 0.6

2017-11-28

- Added highlight backend.
- Added nested search functionality.

12.7.9 0.5.1

2017-10-18

- Fixed serialization of complex nested structures (lists of nested objects).
- Documentation fixes.

12.7.10 0.5

2017-10-05

Note: This release contains changes that might be backwards incompatible for your project. If you have used dynamic document serializer `django_elasticsearch_dsl_drf.serializers.DocumentSerializer` with customisations (with use of `serializers.SerializerMethodField`, having the value parsed to JSON), just remove the custom parts.

- Support for `ObjectField`, `NestedField`, `GeoPointField`, `ListField`, `GeoShapeField` (and in general, nesting fields either as a dictionary or list should not be a problem at all).
- Dynamic serializer has been made less strict.
- Added `get_paginated_response_context` methods to both `PageNumberPagination` and `LimitOffsetPagination` pagination classes to simplify customisations.

12.7.11 0.4.4

2017-10-02

- Documentation improvements (Elasticsearch suggestions).
- More tests (term and phrase suggestions).
- Code style fixes.

12.7.12 0.4.3

2017-09-28

- Documentation fixes.
- Fixes in tests.
- Improved factories.

12.7.13 0.4.2

2017-09-28

- Added `geo_bounding_box` query support to the geo-spatial features.

12.7.14 0.4.1

2017-09-26

- Fixes in docs.

12.7.15 0.4

2017-09-26

Note: This release contains changes that might be backwards incompatible for your project. Make sure to add the `DefaultOrderingFilterBackend` everywhere you have used the `OrderingFilterBackend`, right after the latter.

- `GeoSpatialFilteringFilterBackend` filtering backend, supporting `geo_distance` and `geo_polygon` geo-spatial queries.
- `GeoSpatialOrderingFilterBackend` ordering backend, supporting ordering of results for `geo_distance` filter.
- `OrderingFilterBackend` no longer provides defaults when no ordering is given. In order to take care of the defaults include the `DefaultOrderingFilterBackend` in the list of `filter_backends` (after all other ordering backends).

12.7.16 0.3.12

2017-09-21

- Added `geo_distance` filter. Note, that although functionally the filter would not change its' behaviour, it is likely to be moved to a separate backend (`geo_spatial`). For now use as is.
- Minor fixes.

12.7.17 0.3.11

2017-09-21

- Added `query` argument to `more_like_this` helper.

12.7.18 0.3.10

2017-09-20

- Minor fixes.
- Simplified Elasticsearch version check.

12.7.19 0.3.9

2017-09-12

- Python 2.x compatibility fix.

12.7.20 0.3.8

2017-09-12

- Fixes tests on some environments.

12.7.21 0.3.7

2017-09-07

- Docs fixes.

12.7.22 0.3.6

2017-09-07

- Fixed suggestions test for Elasticsearch 5.x.
- Added *compat* module for painless testing of Elastic 2.x to Elastic 5.x transition.

12.7.23 0.3.5

2017-08-24

- Minor fixes in the ordering backend.
- Improved tests and coverage.

12.7.24 0.3.4

2017-08-23

- Minor fixes in the ordering backend.

12.7.25 0.3.3

2017-07-13

- Minor fixes and improvements.

12.7.26 0.3.2

2017-07-12

- Minor fixes and improvements.

12.7.27 0.3.1

2017-07-12

- Minor Python2 fixes.
- Minor documentation fixes.

12.7.28 0.3

2017-07-11

- Add suggestions support (term, phrase and completion).

12.7.29 0.2.6

2017-07-11

- Minor fixes.
- Fixes in documentation.

12.7.30 0.2.5

2017-07-11

- Fixes in documentation.

12.7.31 0.2.4

2017-07-11

- Fixes in documentation.

12.7.32 0.2.3

2017-07-11

- Fixes in documentation.

12.7.33 0.2.2

2017-07-11

- Fixes in documentation.

12.7.34 0.2.1

2017-07-11

- Fixes in documentation.

12.7.35 0.2

2017-07-11

- Initial faceted search support.
- Pagination support.

12.7.36 0.1.8

2017-06-26

- Python2 fixes.
- Documentation and example project improvements.

12.7.37 0.1.7

2017-06-25

- Dynamic serializer for Documents.
- Major improvements in documentation.

12.7.38 0.1.6

2017-06-23

- Implemented `gt`, `gte`, `lt` and `lte` functional query lookups.
- Implemented `ids` native filter lookup.

12.7.39 0.1.5

2017-06-22

- Implemented `endswith` and `contains` functional filters.
- Added tests for `wildcard`, `exists`, `exclude` and `isnull` filters. Improved `range` filter tests.
- Improve `more_like_this` helper test.
- Improve ordering tests.
- Two additional arguments added to the `more_like_this` helper: `min_doc_freq` and `max_doc_freq`.
- Minor documentation improvements.

12.7.40 0.1.4

2017-06-22

- Added tests for `in`, `term` and `terms` filters.
- Minor documentation fixes.

12.7.41 0.1.3

2017-06-21

- Added tests for `more_like_this` helper, `range` and `prefix` filters.
- Minor documentation improvements.

12.7.42 0.1.2

2017-06-20

- Minor fixes in tests.

12.7.43 0.1.1

2017-06-20

- Fixes in `more_like_this` helper.
- Tiny documentation improvements.

12.7.44 0.1

2017-06-19

- Initial beta release.

                                                    error_messages=None,
                                                    validators=None,      al-
                                                    low_null=False)
```

Bases: `rest_framework.fields.Field`

Object field.

get_value (*dictionary*)
Get value.

to_internal_value (*data*)
To internal value.

to_representation (*value*)
To representation.

12.8.1.2 django_elasticsearch_dsl_drf.filter_backends package

12.8.1.2.1 Subpackages

12.8.1.2.1.1 django_elasticsearch_dsl_drf.filter_backends.filtering package

12.8.1.2.1.2 Submodules

12.8.1.2.1.3 django_elasticsearch_dsl_drf.filter_backends.filtering.common module

Common filtering backend.

```
class django_elasticsearch_dsl_drf.filter_backends.filtering.common.FilteringFilterBackend
Bases: rest_framework.filters.BaseFilterBackend, django_elasticsearch_dsl_drf.filter_backends.mixins.FilterBackendMixin
```

Filtering filter backend for Elasticsearch.

Example:

```
>>> from django_elasticsearch_dsl_drf.constants import (
>>>     LOOKUP_FILTER_PREFIX,
>>>     LOOKUP_FILTER_WILDCARD,
>>>     LOOKUP_QUERY_EXCLUDE,
>>>     LOOKUP_QUERY_ISNULL,
>>> )
>>> from django_elasticsearch_dsl_drf.filter_backends import (
>>>     FilteringFilterBackend
>>> )
>>> from django_elasticsearch_dsl_drf.views import BaseDocumentViewSet
>>>
```

```

>>> # Local article document definition
>>> from .documents import ArticleDocument
>>>
>>> # Local article document serializer
>>> from .serializers import ArticleDocumentSerializer
>>>
>>> class ArticleDocumentView(BaseDocumentViewSet):
>>>
>>>     document = ArticleDocument
>>>     serializer_class = ArticleDocumentSerializer
>>>     filter_backends = [FilteringFilterBackend,]
>>>     filter_fields = {
>>>         'title': 'title.raw',
>>>         'state': {
>>>             'field': 'state.raw',
>>>             'lookups': [
>>>                 LOOKUP_FILTER_PREFIX,
>>>                 LOOKUP_FILTER_WILDCARD,
>>>                 LOOKUP_QUERY_EXCLUDE,
>>>                 LOOKUP_QUERY_ISNULL,
>>>             ],
>>>         }
>>>     }

```

classmethod `apply_filter_prefix` (*queryset, options, value*)

Apply *prefix* filter.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type *elasticsearch_dsl.search.Search*

classmethod `apply_filter_range` (*queryset, options, value*)

Apply *range* filter.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type *elasticsearch_dsl.search.Search*

classmethod `apply_filter_term` (*queryset, options, value*)

Apply *term* filter.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_filter_terms` (*queryset, options, value*)

Apply *terms* filter.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*mixed: either str or iterable (list, tuple)*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_query_contains` (*queryset, options, value*)

Apply *contains* filter.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_query_endswith` (*queryset, options, value*)

Apply *endswith* filter.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_query_exclude` (*queryset, options, value*)

Apply *exclude* functional query.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_query_exists` (*queryset, options, value*)

Apply *exists* filter.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod **apply_query_gt** (*queryset, options, value*)

Apply *gt* functional query.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod **apply_query_gte** (*queryset, options, value*)

Apply *gte* functional query.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod **apply_query_in** (*queryset, options, value*)

Apply *in* functional query.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod **apply_query_isnull** (*queryset, options, value*)

Apply *isnull* functional query.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_query_lt` (*queryset, options, value*)

Apply *lt* functional query.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type *elasticsearch_dsl.search.Search*

classmethod `apply_query_lte` (*queryset, options, value*)

Apply *lte* functional query.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type *elasticsearch_dsl.search.Search*

classmethod `apply_query_wildcard` (*queryset, options, value*)

Apply *wildcard* filter.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type *elasticsearch_dsl.search.Search*

filter_queryset (*request, queryset, view*)

Filter the queryset.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **queryset** (*elasticsearch_dsl.search.Search*) – Base queryset.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Updated queryset.

Return type *elasticsearch_dsl.search.Search*

get_coreschema_field (*field*)

get_filter_query_params (*request, view*)

Get query params to be filtered on.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Request query params to filter on.

Return type dict

classmethod `get_gte_lte_params` (*value, lookup*)

Get params for *gte, gt, lte* and *lt* query.

Parameters

- **value** (*str*) –
- **lookup** (*str*) –

Returns Params to be used in *range* query.

Return type dict

classmethod `get_range_params` (*value*)

Get params for *range* query.

Parameters **value** –

Type str

Returns Params to be used in *range* query.

Return type dict

`get_schema_fields` (*view*)

classmethod `prepare_filter_fields` (*view*)

Prepare filter fields.

Parameters **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) –

Returns Filtering options.

Return type dict

12.8.1.2.1.4 `django_elasticsearch_dsl_drf.filter_backends.filtering.geo_spatial` module

Geo spatial filtering backend.

Elasticsearch supports two types of geo data:

- `geo_point` fields which support lat/lon pairs
- `geo_shape` fields, which support points, lines, circles, polygons, multi-polygons etc.

The queries in this group are:

- `geo_shape` query: Find document with geo-shapes which either intersect, are contained by, or do not intersect with the specified geo-shape.
- `geo_bounding_box` query: Finds documents with geo-points that fall into the specified rectangle.
- `geo_distance` query: Finds document with geo-points within the specified distance of a central point.
- `geo_distance_range` query: Like the `geo_distance` query, but the range starts at a specified distance from the central point. Note, that this one is deprecated and this isn't implemented.
- `geo_polygon` query: Find documents with geo-points within the specified polygon.

class `django_elasticsearch_dsl_drf.filter_backends.filtering.geo_spatial.GeoSpatialFilteringFilterBackend`
 Bases: `rest_framework.filters.BaseFilterBackend`, `django_elasticsearch_dsl_drf.filter_backends.mixins.FilterBackendMixin`

Geo-spatial filtering filter backend for Elasticsearch.

Example:

```
>>> from django_elasticsearch_dsl_drf.constants import (
>>>     LOOKUP_FILTER_GEO_DISTANCE,
>>> )
>>> from django_elasticsearch_dsl_drf.filter_backends import (
>>>     GeoSpatialFilteringFilterBackend
>>> )
>>> from django_elasticsearch_dsl_drf.views import BaseDocumentViewSet
>>>
>>> # Local article document definition
>>> from .documents import ArticleDocument
>>>
>>> # Local article document serializer
>>> from .serializers import ArticleDocumentSerializer
>>>
>>> class ArticleDocumentView(BaseDocumentViewSet):
>>>
>>>     document = ArticleDocument
>>>     serializer_class = ArticleDocumentSerializer
>>>     filter_backends = [GeoSpatialFilteringFilterBackend,]
>>>     geo_spatial_filter_fields = {
>>>         'loc': 'location',
>>>         'location': {
>>>             'field': 'location',
>>>             'lookups': [
>>>                 LOOKUP_FILTER_GEO_DISTANCE,
>>>             ],
>>>         }
>>> }
```

classmethod `apply_query_geo_bounding_box(queryset, options, value)`
 Apply `geo_bounding_box` query.

Parameters

- **queryset** (`elasticsearch_dsl.search.Search`) – Original queryset.
- **options** (`dict`) – Filter options.
- **value** (`str`) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_query_geo_distance(queryset, options, value)`
 Apply `geo_distance` query.

Parameters

- **queryset** (`elasticsearch_dsl.search.Search`) – Original queryset.
- **options** (`dict`) – Filter options.
- **value** (`str`) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_query_geo_polygon` (*queryset, options, value*)

Apply *geo_polygon* query.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

filter_queryset (*request, queryset, view*)

Filter the queryset.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **queryset** (*elasticsearch_dsl.search.Search*) – Base queryset.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Updated queryset.

Return type `elasticsearch_dsl.search.Search`

get_filter_query_params (*request, view*)

Get query params to be filtered on.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Request query params to filter on.

Return type `dict`

classmethod `get_geo_bounding_box_params` (*value, field*)

Get params for *geo_bounding_box* query.

Example:

```
/api/articles/?location__geo_bounding_box=40.73,-74.1|40.01,-71.12
```

Example:

```
/api/articles/?location__geo_polygon=40.73,-74.1|40.01,-71.12
_l_name:mynamelvalidation_method:IGNORE_MALFORMED|type:indexed
```

Elasticsearch:

```
{
  "query": {
    "bool" [{}]
```

```

        }, "filter": {
            "geo_polygon": [{}
                "person.location": [{}
                    "points": [{} {"lat": 40, "lon": -70}, {"lat": 30, "lon":
                        -80}, {"lat": 20, "lon": -90}
                    ]
                ]
            ]
        }
    }
}
    
```

Parameters

- **value** (*str*) –
- **field** –

Returns Params to be used in *geo_distance* query.

Return type dict

classmethod `prepare_filter_fields` (*view*)

Prepare filter fields.

Parameters **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) –

Returns Filtering options.

Return type dict

12.8.1.2.1.5 django_elasticsearch_dsl_drf.filter_backends.filtering.ids module

Ids filtering backend.

Filters documents that only have the provided ids. Note, this query uses the *_uid* field.

Elastic query:

```

{
    "query": {
        "ids": { "type": "book_document", "values": ["68", "64", "58"]
        }
    }
}
    
```

REST framework request equivalent:

- <http://localhost:8000/api/articles/?ids=68|64|58>
- <http://localhost:8000/api/articles/?ids=68&ids=64&ids=58>

Official Elastic docs:

- <https://www.elastic.co/guide/en/elasticsearch/reference/current/query-dsl-ids-query.html>

```
class django_elasticsearch_dsl_drf.filter_backends.filtering.ids.IdsFilterBackend
    Bases: rest_framework.filters.BaseFilterBackend, django_elasticsearch_dsl_drf.filter_backends.mixins.FilterBackendMixin
```

Ids filter backend for Elasticsearch.

Example:

```
>>> from django_elasticsearch_dsl_drf.filter_backends import (
>>>     IdsFilterBackend
>>> )
>>> from django_elasticsearch_dsl_drf.views import BaseDocumentViewSet
>>>
>>> # Local article document definition
>>> from .documents import ArticleDocument
>>>
>>> # Local article document serializer
>>> from .serializers import ArticleDocumentSerializer
>>>
>>> class ArticleDocumentView(BaseDocumentViewSet):
>>>
>>>     document = ArticleDocument
>>>     serializer_class = ArticleDocumentSerializer
>>>     filter_backends = [IdsFilterBackend]
```

filter_queryset (*request, queryset, view*)

Filter the queryset.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **queryset** (*elasticsearch_dsl.search.Search*) – Base queryset.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Updated queryset.

Return type *elasticsearch_dsl.search.Search*

get_ids_query_params (*request*)

Get search query params.

Parameters **request** (*rest_framework.request.Request*) – Django REST framework request.

Returns List of search query params.

Return type list

get_ids_values (*request, view*)

Get ids values for query.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **queryset** (*elasticsearch_dsl.search.Search*) – Base queryset.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Updated queryset.

Return type *elasticsearch_dsl.search.Search*

ids_query_param = 'ids'

12.8.1.2.1.6 Module contents

Term level filtering backends.

class `django_elasticsearch_dsl_drf.filter_backends.filtering.FilteringFilterBackend`
 Bases: `rest_framework.filters.BaseFilterBackend`, `django_elasticsearch_dsl_drf.filter_backends.mixins.FilterBackendMixin`

Filtering filter backend for Elasticsearch.

Example:

```
>>> from django_elasticsearch_dsl_drf.constants import (
>>>     LOOKUP_FILTER_PREFIX,
>>>     LOOKUP_FILTER_WILDCARD,
>>>     LOOKUP_QUERY_EXCLUDE,
>>>     LOOKUP_QUERY_ISNULL,
>>> )
>>> from django_elasticsearch_dsl_drf.filter_backends import (
>>>     FilteringFilterBackend
>>> )
>>> from django_elasticsearch_dsl_drf.views import BaseDocumentViewSet
>>>
>>> # Local article document definition
>>> from .documents import ArticleDocument
>>>
>>> # Local article document serializer
>>> from .serializers import ArticleDocumentSerializer
>>>
>>> class ArticleDocumentView(BaseDocumentViewSet):
>>>
>>>     document = ArticleDocument
>>>     serializer_class = ArticleDocumentSerializer
>>>     filter_backends = [FilteringFilterBackend,]
>>>     filter_fields = {
>>>         'title': 'title.raw',
>>>         'state': {
>>>             'field': 'state.raw',
>>>             'lookups': [
>>>                 LOOKUP_FILTER_PREFIX,
>>>                 LOOKUP_FILTER_WILDCARD,
>>>                 LOOKUP_QUERY_EXCLUDE,
>>>                 LOOKUP_QUERY_ISNULL,
>>>             ],
>>>         },
>>>     }
>>> }
```

classmethod `apply_filter_prefix` (*queryset, options, value*)

Apply *prefix* filter.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_filter_range` (*queryset, options, value*)

Apply *range* filter.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original query-set.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_filter_term` (*queryset, options, value*)

Apply *term* filter.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original query-set.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_filter_terms` (*queryset, options, value*)

Apply *terms* filter.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original query-set.
- **options** (*dict*) – Filter options.
- **value** (*mixed: either str or iterable (list, tuple)*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_query_contains` (*queryset, options, value*)

Apply *contains* filter.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original query-set.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_query_endswith` (*queryset, options, value*)

Apply *endswith* filter.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original query-set.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_query_exclude` (*queryset, options, value*)

Apply *exclude* functional query.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_query_exists` (*queryset, options, value*)

Apply *exists* filter.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_query_gt` (*queryset, options, value*)

Apply *gt* functional query.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_query_gte` (*queryset, options, value*)

Apply *gte* functional query.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_query_in` (*queryset, options, value*)

Apply *in* functional query.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.

- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_query_isnull` (*queryset, options, value*)

Apply *isnull* functional query.

Parameters

- **queryset** (`elasticsearch_dsl.search.Search`) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_query_lt` (*queryset, options, value*)

Apply *lt* functional query.

Parameters

- **queryset** (`elasticsearch_dsl.search.Search`) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_query_lte` (*queryset, options, value*)

Apply *lte* functional query.

Parameters

- **queryset** (`elasticsearch_dsl.search.Search`) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_query_wildcard` (*queryset, options, value*)

Apply *wildcard* filter.

Parameters

- **queryset** (`elasticsearch_dsl.search.Search`) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

filter_queryset (*request, queryset, view*)

Filter the queryset.

Parameters

- **request** (`rest_framework.request.Request`) – Django REST framework request.

- **queryset** (*elasticsearch_dsl.search.Search*) – Base queryset.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Updated queryset.

Return type *elasticsearch_dsl.search.Search*

get_coreschema_field (*field*)

get_filter_query_params (*request, view*)

Get query params to be filtered on.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Request query params to filter on.

Return type dict

classmethod get_gte_lte_params (*value, lookup*)

Get params for *gte*, *gt*, *lte* and *lt* query.

Parameters

- **value** (*str*) –
- **lookup** (*str*) –

Returns Params to be used in *range* query.

Return type dict

classmethod get_range_params (*value*)

Get params for *range* query.

Parameters **value** –

Type str

Returns Params to be used in *range* query.

Return type dict

get_schema_fields (*view*)

classmethod prepare_filter_fields (*view*)

Prepare filter fields.

Parameters **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) –

Returns Filtering options.

Return type dict

class *django_elasticsearch_dsl_drf.filter_backends.filtering.GeoSpatialFilteringFilterBackend*

Bases: *rest_framework.filters.BaseFilterBackend*, *django_elasticsearch_dsl_drf.*

filter_backends.mixins.FilterBackendMixin

Geo-spatial filtering filter backend for Elasticsearch.

Example:

```
>>> from django_elasticsearch_dsl_drf.constants import (
>>>     LOOKUP_FILTER_GEO_DISTANCE,
>>> )
>>> from django_elasticsearch_dsl_drf.filter_backends import (
>>>     GeoSpatialFilteringFilterBackend
>>> )
>>> from django_elasticsearch_dsl_drf.views import BaseDocumentViewSet
>>>
```

```

>>> # Local article document definition
>>> from .documents import ArticleDocument
>>>
>>> # Local article document serializer
>>> from .serializers import ArticleDocumentSerializer
>>>
>>> class ArticleDocumentView(BaseDocumentViewSet):
>>>
>>>     document = ArticleDocument
>>>     serializer_class = ArticleDocumentSerializer
>>>     filter_backends = [GeoSpatialFilteringFilterBackend,]
>>>     geo_spatial_filter_fields = {
>>>         'loc': 'location',
>>>         'location': {
>>>             'field': 'location',
>>>             'lookups': [
>>>                 LOOKUP_FILTER_GEO_DISTANCE,
>>>             ],
>>>         }
>>> }

```

classmethod `apply_query_geo_bounding_box` (*queryset, options, value*)

Apply *geo_bounding_box* query.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_query_geo_distance` (*queryset, options, value*)

Apply *geo_distance* query.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_query_geo_polygon` (*queryset, options, value*)

Apply *geo_polygon* query.

Parameters

- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

filter_queryset (*request, queryset, view*)

Filter the queryset.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **queryset** (*elasticsearch_dsl.search.Search*) – Base queryset.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Updated queryset.

Return type *elasticsearch_dsl.search.Search*

get_filter_query_params (*request, view*)

Get query params to be filtered on.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Request query params to filter on.

Return type dict

classmethod get_geo_bounding_box_params (*value, field*)

Get params for *geo_bounding_box* query.

Example:

`/api/articles/?location__geo_bounding_box=40.73,-74.1|40.01,-71.12`

Example:

`/api/articles/?location__geo_polygon=40.73,-74.1|40.01,-71.12`

`!_name:mynamelvalidation_method:IGNORE_MALFORMED!type:indexed`

Elasticsearch:

```
{
  "query": {
    "bool": [{}
      "must": [{} "match_all": {}
    ], "filter": {
      "geo_bounding_box": [{}
        "person.location": [{}
          "top_left": [{} "lat": 40.73, "lon": -74.1
        ], "bottom_right": {
          "lat": 40.01, "lon": -71.12
        }
      ]
    }
  }
}
```

```
    }
}
```

Parameters

- **value** (*str*) –
- **field** –

Returns Params to be used in *geo_bounding_box* query.

Return type dict

classmethod `get_geo_distance_params` (*value, field*)

Get params for *geo_distance* query.

Example:

```
/api/articles/?location__geo_distance=2kml43.53l-12.23
```

Parameters

- **value** (*str*) –
- **field** –

Returns Params to be used in *geo_distance* query.

Return type dict

classmethod `get_geo_polygon_params` (*value, field*)

Get params for *geo_polygon* query.

Example:

```
/api/articles/?location__geo_polygon=40,-70l30,-80l20,-90
```

Example:

```
/api/articles/?location__geo_polygon=40,-70l30,-80l20,-90
```

```
!_name:mynamelvalidation_method:IGNORE_MALFORMED
```

Elasticsearch:

```
{
  "query": {
    "bool": [{
      "must": [{ "match_all": {} }],
      "filter": {
        "geo_polygon": [{
          "person.location": [{
            "points": [[ { "lat": 40, "lon": -70 }, { "lat": 30, "lon": -80 }, { "lat": 20, "lon": -90 } ]
          }
        ]
      }
    ]
  }
}
```

Parameters

- **value** (*str*) –

- **field** –

Returns Params to be used in *geo_distance* query.

Return type dict

classmethod **prepare_filter_fields** (*view*)

Prepare filter fields.

Parameters **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) –

Returns Filtering options.

Return type dict

class `django_elasticsearch_dsl_drf.filter_backends.filtering.IdsFilterBackend`

Bases: `rest_framework.filters.BaseFilterBackend`, `django_elasticsearch_dsl_drf.filter_backends.mixins.FilterBackendMixin`

Ids filter backend for Elasticsearch.

Example:

```
>>> from django_elasticsearch_dsl_drf.filter_backends import (
>>>     IdsFilterBackend
>>> )
>>> from django_elasticsearch_dsl_drf.views import BaseDocumentViewSet
>>>
>>> # Local article document definition
>>> from .documents import ArticleDocument
>>>
>>> # Local article document serializer
>>> from .serializers import ArticleDocumentSerializer
>>>
>>> class ArticleDocumentView(BaseDocumentViewSet):
>>>
>>>     document = ArticleDocument
>>>     serializer_class = ArticleDocumentSerializer
>>>     filter_backends = [IdsFilterBackend]
```

filter_queryset (*request, queryset, view*)

Filter the queryset.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.

- **queryset** (*elasticsearch_dsl.search.Search*) – Base queryset.

- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Updated queryset.

Return type `elasticsearch_dsl.search.Search`

get_ids_query_params (*request*)

Get search query params.

Parameters **request** (*rest_framework.request.Request*) – Django REST framework request.

Returns List of search query params.

Return type list

get_ids_values (*request, view*)

Get ids values for query.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **queryset** (*elasticsearch_dsl.search.Search*) – Base queryset.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Updated queryset.

Return type *elasticsearch_dsl.search.Search*

```
ids_query_param = 'ids'
```

12.8.1.2.1.7 `django_elasticsearch_dsl_drf.filter_backends.ordering` package

12.8.1.2.1.8 Submodules

12.8.1.2.1.9 `django_elasticsearch_dsl_drf.filter_backends.ordering.common` module

Ordering backend.

```
class django_elasticsearch_dsl_drf.filter_backends.ordering.common.DefaultOrderingFilterBackend
    Bases: rest_framework.filters.BaseFilterBackend
```

Default ordering filter backend for Elasticsearch.

Make sure this is your last ordering backend.

Example:

```
>>> from django_elasticsearch_dsl_drf.filter_backends import (
>>>     DefaultOrderingFilterBackend,
>>>     OrderingFilterBackend
>>> )
>>> from django_elasticsearch_dsl_drf.views import BaseDocumentViewSet
>>>
>>> # Local article document definition
>>> from .documents import ArticleDocument
>>>
>>> # Local article document serializer
>>> from .serializers import ArticleDocumentSerializer
>>>
>>> class ArticleDocumentView(BaseDocumentViewSet):
>>>
>>>     document = ArticleDocument
>>>     serializer_class = ArticleDocumentSerializer
>>>     filter_backends = [
>>>         DefaultOrderingFilterBackend,
>>>         OrderingFilterBackend,
>>>     ]
>>>     ordering_fields = {
>>>         'id': 'id',
>>>         'title': 'title.raw',
>>>         'date_submitted': 'date_submitted',
>>>         'state': {
>>>             'field': 'state.raw',
>>>         }
>>>     }
```

```
>>> }
>>> ordering = 'name'
```

filter_queryset (*request, queryset, view*)

Filter the queryset.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **queryset** (*elasticsearch_dsl.search.Search*) – Base queryset.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Updated queryset.

Return type *elasticsearch_dsl.search.Search*

classmethod get_default_ordering_params (*view*)

Get the default ordering params for the view.

Parameters **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Ordering params to be used for ordering.

Return type list

get_ordering_query_params (*request, view*)

Get ordering query params.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Ordering params to be used for ordering.

Return type list

ordering_param = 'ordering'

class *django_elasticsearch_dsl_drf.filter_backends.ordering.common.OrderingFilterBackend*
 Bases: *rest_framework.filters.BaseFilterBackend*

Ordering filter backend for Elasticsearch.

Example:

```
>>> from django_elasticsearch_dsl_drf.filter_backends import (
>>>     OrderingFilterBackend
>>> )
>>> from django_elasticsearch_dsl_drf.views import BaseDocumentViewSet
>>>
>>> # Local article document definition
>>> from .documents import ArticleDocument
>>>
>>> # Local article document serializer
>>> from .serializers import ArticleDocumentSerializer
>>>
>>> class ArticleDocumentView(BaseDocumentViewSet):
>>>
>>>     document = ArticleDocument
>>>     serializer_class = ArticleDocumentSerializer
```

```

>>> filter_backends = [OrderingFilterBackend,]
>>> ordering_fields = {
>>>     'id': 'id',
>>>     'title': 'title.raw',
>>>     'date_submitted': 'date_submitted',
>>>     'state': {
>>>         'field': 'state.raw',
>>>     }
>>> }
>>> ordering = ('id', 'name',)

```

filter_queryset (*request, queryset, view*)

Filter the queryset.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **queryset** (*elasticsearch_dsl.search.Search*) – Base queryset.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Updated queryset.

Return type *elasticsearch_dsl.search.Search*

get_ordering_query_params (*request, view*)

Get ordering query params.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Ordering params to be used for ordering.

Return type list

get_schema_fields (*view*)

ordering_param = 'ordering'

12.8.1.2.1.10 django_elasticsearch_dsl_drf.filter_backends.ordering.geo_spatial module

Geo-spatial ordering backend.

class *django_elasticsearch_dsl_drf.filter_backends.ordering.geo_spatial.GeoSpatialOrderingFilterBackend*
 Bases: *rest_framework.filters.BaseFilterBackend, django_elasticsearch_dsl_drf.filter_backends.mixins.FilterBackendMixin*

Geo-spatial ordering filter backend for Elasticsearch.

Example:

```

>>> from django_elasticsearch_dsl_drf.filter_backends import (
>>>     GeoSpatialOrderingFilterBackend
>>> )
>>> from django_elasticsearch_dsl_drf.views import BaseDocumentViewSet
>>>
>>> # Local article document definition

```

```

>>> from .documents import ArticleDocument
>>>
>>> # Local article document serializer
>>> from .serializers import ArticleDocumentSerializer
>>>
>>> class ArticleDocumentView(BaseDocumentViewSet):
>>>
>>>     document = ArticleDocument
>>>     serializer_class = ArticleDocumentSerializer
>>>     filter_backends = [GeoSpatialOrderingFilterBackend,]
>>>     geo_spatial_ordering_fields = {
>>>         'location': {
>>>             'field': 'location',
>>>         }
>>>     }

```

filter_queryset (*request, queryset, view*)

Filter the queryset.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **queryset** (*elasticsearch_dsl.search.Search*) – Base queryset.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Updated queryset.

Return type *elasticsearch_dsl.search.Search*

classmethod get_geo_distance_params (*value, field*)

Get params for *geo_distance* ordering.

Example:

`/api/articles/?ordering=-location|45.3214|-34.3421|kmlplanes`

Parameters

- **value** (*str*) –
- **field** –

Returns Params to be used in *geo_distance* query.

Return type dict

get_ordering_query_params (*request, view*)

Get ordering query params.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Ordering params to be used for ordering.

Return type list

`ordering_param = 'ordering'`

12.8.1.2.1.11 Module contents

Ordering backends.

class `django_elasticsearch_dsl_drf.filter_backends.ordering.DefaultOrderingFilterBackend`
 Bases: `rest_framework.filters.BaseFilterBackend`

Default ordering filter backend for Elasticsearch.

Make sure this is your last ordering backend.

Example:

```
>>> from django_elasticsearch_dsl_drf.filter_backends import (
>>>     DefaultOrderingFilterBackend,
>>>     OrderingFilterBackend
>>> )
>>> from django_elasticsearch_dsl_drf.views import BaseDocumentViewSet
>>>
>>> # Local article document definition
>>> from .documents import ArticleDocument
>>>
>>> # Local article document serializer
>>> from .serializers import ArticleDocumentSerializer
>>>
>>> class ArticleDocumentView(BaseDocumentViewSet):
>>>
>>>     document = ArticleDocument
>>>     serializer_class = ArticleDocumentSerializer
>>>     filter_backends = [
>>>         DefaultOrderingFilterBackend,
>>>         OrderingFilterBackend,
>>>     ]
>>>     ordering_fields = {
>>>         'id': 'id',
>>>         'title': 'title.raw',
>>>         'date_submitted': 'date_submitted',
>>>         'state': {
>>>             'field': 'state.raw',
>>>         }
>>>     }
>>>     ordering = 'name'
```

filter_queryset (*request, queryset, view*)

Filter the queryset.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **queryset** (*elasticsearch_dsl.search.Search*) – Base queryset.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Updated queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `get_default_ordering_params` (*view*)

Get the default ordering params for the view.

Parameters `view` (`rest_framework.viewsets.ReadOnlyModelViewSet`) – View.

Returns Ordering params to be used for ordering.

Return type list

get_ordering_query_params (`request`, `view`)

Get ordering query params.

Parameters

- **request** (`rest_framework.request.Request`) – Django REST framework request.

- **view** (`rest_framework.viewsets.ReadOnlyModelViewSet`) – View.

Returns Ordering params to be used for ordering.

Return type list

`ordering_param = 'ordering'`

class `django_elasticsearch_dsl_drf.filter_backends.ordering.GeoSpatialOrderingFilterBackend`

Bases: `rest_framework.filters.BaseFilterBackend`, `django_elasticsearch_dsl_drf.filter_backends.mixins.FilterBackendMixin`

Geo-spatial ordering filter backend for Elasticsearch.

Example:

```
>>> from django_elasticsearch_dsl_drf.filter_backends import (
>>>     GeoSpatialOrderingFilterBackend
>>> )
>>> from django_elasticsearch_dsl_drf.views import BaseDocumentViewSet
>>>
>>> # Local article document definition
>>> from .documents import ArticleDocument
>>>
>>> # Local article document serializer
>>> from .serializers import ArticleDocumentSerializer
>>>
>>> class ArticleDocumentView(BaseDocumentViewSet):
>>>
>>>     document = ArticleDocument
>>>     serializer_class = ArticleDocumentSerializer
>>>     filter_backends = [GeoSpatialOrderingFilterBackend,]
>>>     geo_spatial_ordering_fields = {
>>>         'location': {
>>>             'field': 'location',
>>>         }
>>>     }
```

filter_queryset (`request`, `queryset`, `view`)

Filter the queryset.

Parameters

- **request** (`rest_framework.request.Request`) – Django REST framework request.

- **queryset** (`elasticsearch_dsl.search.Search`) – Base queryset.

- **view** (`rest_framework.viewsets.ReadOnlyModelViewSet`) – View.

Returns Updated queryset.

Return type elasticsearch_dsl.search.Search

classmethod `get_geo_distance_params` (*value*, *field*)

Get params for *geo_distance* ordering.

Example:

`/api/articles/?ordering=-location|45.3214|-34.3421|km|planes`

Parameters

- **value** (*str*) –
- **field** –

Returns Params to be used in *geo_distance* query.

Return type dict

get_ordering_query_params (*request*, *view*)

Get ordering query params.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Ordering params to be used for ordering.

Return type list

`ordering_param = 'ordering'`

class `django_elasticsearch_dsl_drf.filter_backends.ordering.OrderingFilterBackend`

Bases: `rest_framework.filters.BaseFilterBackend`

Ordering filter backend for Elasticsearch.

Example:

```
>>> from django_elasticsearch_dsl_drf.filter_backends import (
>>>     OrderingFilterBackend
>>> )
>>> from django_elasticsearch_dsl_drf.views import BaseDocumentViewSet
>>>
>>> # Local article document definition
>>> from .documents import ArticleDocument
>>>
>>> # Local article document serializer
>>> from .serializers import ArticleDocumentSerializer
>>>
>>> class ArticleDocumentView(BaseDocumentViewSet):
>>>
>>>     document = ArticleDocument
>>>     serializer_class = ArticleDocumentSerializer
>>>     filter_backends = [OrderingFilterBackend,]
>>>     ordering_fields = {
>>>         'id': 'id',
>>>         'title': 'title.raw',
>>>         'date_submitted': 'date_submitted',
>>>         'state': {
>>>             'field': 'state.raw',
>>>         }
>>>     }
>>>
>>>     ordering = ('id', 'name',)
```

filter_queryset (*request, queryset, view*)

Filter the queryset.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **queryset** (*elasticsearch_dsl.search.Search*) – Base queryset.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Updated queryset.

Return type *elasticsearch_dsl.search.Search*

get_ordering_query_params (*request, view*)

Get ordering query params.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Ordering params to be used for ordering.

Return type *list*

get_schema_fields (*view*)

ordering_param = 'ordering'

12.8.1.2.2 Submodules

12.8.1.2.3 `django_elasticsearch_dsl_drf.filter_backends.faceted_search` module

Faceted search backend.

class `django_elasticsearch_dsl_drf.filter_backends.faceted_search.FacetedSearchFilterBackend`
 Bases: `rest_framework.filters.BaseFilterBackend`

Faceted search backend.

Example:

```
>>> from django_elasticsearch_dsl_drf.filter_backends import (
>>>     FacetedSearchFilterBackend
>>> )
>>> from elasticsearch_dsl import TermsFacet, DateHistogramFacet
>>> from django_elasticsearch_dsl_drf.views import BaseDocumentViewSet
>>>
>>> # Local article document definition
>>> from .documents import ArticleDocument
>>>
>>> # Local article document serializer
>>> from .serializers import ArticleDocumentSerializer
>>>
>>> class ArticleDocumentView(BaseDocumentViewSet):
>>>
>>>     document = ArticleDocument
>>>     serializer_class = ArticleDocumentSerializer
```

```

>>> filter_backends = [FacetedSearchFilterBackend,]
>>> faceted_search_fields = {
>>>     'title': 'title.raw', # Uses `TermsFacet` by default
>>>     'state': {
>>>         'field': 'state.raw',
>>>         'facet': TermsFacet,
>>>     },
>>>     'publisher': {
>>>         'field': 'publisher.raw',
>>>         'facet': TermsFacet,
>>>         'enabled': False,
>>>     },
>>>     'date_published': {
>>>         'field': 'date_published.raw',
>>>         'facet': DateHistogramFacet,
>>>         'options': {
>>>             'interval': 'month',
>>>         },
>>>         'enabled': True,
>>>     },
>>> }

```

Facets make queries to be more heavy. That's why by default all facets are disabled and enabled only explicitly either in the filter options (*enabled* set to True) or via query params *?facet=state&facet=date_published*.

aggregate (*request, queryset, view*)

Aggregate.

Parameters

- **request** –
- **queryset** –
- **view** –

Returns

construct_facets (*request, view*)

Construct facets.

Turns the following structure:

```

>>> {
>>>     'publisher': {
>>>         'field': 'publisher.raw',
>>>         'facet': TermsFacet,
>>>         'enabled': False,
>>>     }
>>>     'date_published': {
>>>         'field': 'date_published',
>>>         'facet': DateHistogramFacet,
>>>         'options': {
>>>             'interval': 'month',
>>>         },
>>>         'enabled': True,
>>>     },
>>> }

```

Into the following structure:

```

>>> {
>>>     'publisher': TermsFacet(field='publisher.raw'),
>>>     'publishing_frequency': DateHistogramFacet(
>>>         field='date_published.raw',
>>>         interval='month'
>>>     ),
>>> }

```

faceted_search_param = 'facet'

filter_queryset (*request, queryset, view*)

Filter the queryset.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **queryset** (*elasticsearch_dsl.search.Search*) – Base queryset.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Updated queryset.

Return type *elasticsearch_dsl.search.Search*

get_faceted_search_query_params (*request*)

Get faceted search query params.

Parameters **request** (*rest_framework.request.Request*) – Django REST framework request.

Returns List of search query params.

Return type list

classmethod **prepare_faceted_search_fields** (*view*)

Prepare faceted search fields.

Prepares the following structure:

```

>>> {
>>>     'publisher': {
>>>         'field': 'publisher.raw',
>>>         'facet': TermsFacet,
>>>         'enabled': False,
>>>     }
>>>     'date_published': {
>>>         'field': 'date_published.raw',
>>>         'facet': DateHistogramFacet,
>>>         'options': {
>>>             'interval': 'month',
>>>         },
>>>         'enabled': True,
>>>     },
>>> }

```

Parameters **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) –

Returns Faceted search fields options.

Return type dict

12.8.1.2.4 django_elasticsearch_dsl_drf.filter_backends.mixins module

Mixins.

class django_elasticsearch_dsl_drf.filter_backends.mixins.**FilterBackendMixin**

Bases: object

Filter backend mixin.

classmethod **split_lookup_complex_value** (*value*, *maxsplit=-1*)

Split lookup complex value.

Parameters

- **value** (*str*) – Value to split.
- **maxsplit** (*int*) – The *maxsplit* option of *string.split*.

Returns Lookup filter split into a list.

Return type list

classmethod **split_lookup_filter** (*value*, *maxsplit=-1*)

Split lookup filter.

Parameters

- **value** (*str*) – Value to split.
- **maxsplit** (*int*) – The *maxsplit* option of *string.split*.

Returns Lookup filter split into a list.

Return type list

classmethod **split_lookup_value** (*value*, *maxsplit=-1*)

Split lookup value.

Parameters

- **value** (*str*) – Value to split.
- **maxsplit** (*int*) – The *maxsplit* option of *string.split*.

Returns Lookup value split into a list.

Return type list

12.8.1.2.5 django_elasticsearch_dsl_drf.filter_backends.search module

Search backend.

class django_elasticsearch_dsl_drf.filter_backends.search.**SearchFilterBackend**

Bases: rest_framework.filters.BaseFilterBackend, *django_elasticsearch_dsl_drf.filter_backends.mixins.FilterBackendMixin*

Search filter backend for Elasticsearch.

Example:

```
>>> from django_elasticsearch_dsl_drf.filter_backends import (
>>>     SearchFilterBackend
>>> )
>>> from django_elasticsearch_dsl_drf.views import BaseDocumentViewSet
>>>
>>> # Local article document definition
>>> from .documents import ArticleDocument
>>>
>>> # Local article document serializer
```

```
>>> from .serializers import ArticleDocumentSerializer
>>>
>>> class ArticleDocumentView(BaseDocumentViewSet):
>>>
>>>     document = ArticleDocument
>>>     serializer_class = ArticleDocumentSerializer
>>>     filter_backends = [SearchFilterBackend,]
>>>     search_fields = (
>>>         'title',
>>>         'content',
>>>     )
>>>     search_nested_fields = {
>>>         'state': ['name'],
>>>         'documents.author': ['title', 'description'],
>>>     }
```

construct_nested_search (*request, view*)

Construct nested search.

We have to deal with two types of structures:

Type 1:

```
>>> search_nested_fields = {
>>>     'country': ['name'],
>>> }
```

Type 2:

```
>>> search_nested_fields = {
>>>     'country': [{'name': {'boost': 2}}],
>>> }
```

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **queryset** (*elasticsearch_dsl.search.Search*) – Base queryset.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Updated queryset.

Return type *elasticsearch_dsl.search.Search*

construct_search (*request, view*)

Construct search.

We have to deal with two types of structures:

Type 1:

```
>>> search_fields = (
>>>     'title',
>>>     'description',
>>>     'summary',
>>> )
```

Type 2:

```
>>> search_fields = {
>>>     'title': {'boost': 2},
>>>     'description': None,
>>>     'summary': None,
>>> }
```

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **queryset** (*elasticsearch_dsl.search.Search*) – Base queryset.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Updated queryset.**Return type** *elasticsearch_dsl.search.Search***filter_queryset** (*request, queryset, view*)

Filter the queryset.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **queryset** (*elasticsearch_dsl.search.Search*) – Base queryset.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Updated queryset.**Return type** *elasticsearch_dsl.search.Search***get_coreschema_field** (*field*)**get_schema_fields** (*view*)**get_search_query_params** (*request*)

Get search query params.

Parameters **request** (*rest_framework.request.Request*) – Django REST framework request.**Returns** List of search query params.**Return type** list**search_param** = 'search'

12.8.1.2.6 `django_elasticsearch_dsl_drf.filter_backends.suggester` module

Suggesters backend.

It's assumed, that fields you're planning to query suggestions for have been properly indexed using `fields.CompletionField`.

Example:

```
>>> from django_elasticsearch_dsl import DocType, Index, fields
>>>
>>> from books.models import Publisher
>>>
>>> # Name of the Elasticsearch index
>>> PUBLISHER_INDEX = Index(PUBLISHER_INDEX_NAME)
```

```

>>> # See Elasticsearch Indices API reference for available settings
>>> PUBLISHER_INDEX.settings(
>>>     number_of_shards=1,
>>>     number_of_replicas=1
>>> )
>>>
>>> @PUBLISHER_INDEX.doc_type
>>> class PublisherDocument (DocType):
>>>     "Publisher Elasticsearch document."
>>>
>>>     id = fields.IntegerField(attr='id')
>>>
>>>     name = fields.StringField(
>>>         fields={
>>>             'raw': fields.StringField(analyzer='keyword'),
>>>             'suggest': fields.CompletionField(),
>>>         }
>>>     )
>>>
>>>     info = fields.StringField()
>>>
>>>     address = fields.StringField(
>>>         fields={
>>>             'raw': fields.StringField(analyzer='keyword')
>>>         }
>>>     )
>>>
>>>     city = fields.StringField(
>>>         fields={
>>>             'raw': fields.StringField(analyzer='keyword'),
>>>             'suggest': fields.CompletionField(),
>>>         }
>>>     )
>>>
>>>     state_province = fields.StringField(
>>>         fields={
>>>             'raw': fields.StringField(analyzer='keyword'),
>>>             'suggest': fields.CompletionField(),
>>>         }
>>>     )
>>>
>>>     country = fields.StringField(
>>>         fields={
>>>             'raw': fields.StringField(analyzer='keyword'),
>>>             'suggest': fields.CompletionField(),
>>>         }
>>>     )
>>>
>>>     website = fields.StringField()
>>>
>>>     class Meta(object):
>>>         "Meta options."
>>>
>>>         model = Publisher # The model associate with this DocType

```

```

class django_elasticsearch_dsl_drf.filter_backends.suggester.SuggesterFilterBackend
    Bases: rest_framework.filters.BaseFilterBackend, django_elasticsearch_dsl_drf.
    filter_backends.mixins.FilterBackendMixin

```

Suggester filter backend for Elasticsearch.

Suggestion functionality is exclusive. Once you have queried the `SuggesterFilterBackend`, the latter will transform your current search query into suggestion search query (which is very different). Therefore, always add it as the very last filter backend.

Example:

```
>>> from django_elasticsearch_dsl_drf.constants import (
>>>     SUGGESTER_TERM,
>>>     SUGGESTER_PHRASE,
>>>     SUGGESTER_COMPLETION,
>>> )
>>> from django_elasticsearch_dsl_drf.filter_backends import (
>>>     SuggesterFilterBackend
>>> )
>>> from django_elasticsearch_dsl_drf.views import BaseDocumentViewSet
>>>
>>> # Local PublisherDocument definition
>>> from .documents import PublisherDocument
>>>
>>> # Local PublisherDocument serializer
>>> from .serializers import PublisherDocumentSerializer
>>>
>>> class PublisherDocumentView(BaseDocumentViewSet):
>>>
>>>     document = PublisherDocument
>>>     serializer_class = PublisherDocumentSerializer
>>>     filter_backends = [
>>>         # ...
>>>         SuggesterFilterBackend,
>>>     ]
>>>     # Suggester fields
>>>     suggester_fields = {
>>>         'name_suggest': {
>>>             'field': 'name.suggest',
>>>             'suggesters': [
>>>                 SUGGESTER_TERM,
>>>                 SUGGESTER_PHRASE,
>>>                 SUGGESTER_COMPLETION,
>>>             ],
>>>         },
>>>         'city_suggest': {
>>>             'field': 'city.suggest',
>>>             'suggesters': [
>>>                 SUGGESTER_COMPLETION,
>>>             ],
>>>         },
>>>         'state_province_suggest': {
>>>             'field': 'state_province.suggest',
>>>             'suggesters': [
>>>                 SUGGESTER_COMPLETION,
>>>             ],
>>>         },
>>>         'country_suggest': {
>>>             'field': 'country.suggest',
>>>             'suggesters': [
>>>                 SUGGESTER_COMPLETION,
>>>             ],
>>>         },
>>>     }
```

```
>>>         },
>>>     }
```

classmethod `apply_suggester_completion` (*suggester_name*, *queryset*, *options*, *value*)

Apply *completion* suggester.

Parameters

- **suggester_name** (*str*) –
- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_suggester_phrase` (*suggester_name*, *queryset*, *options*, *value*)

Apply *phrase* suggester.

Parameters

- **suggester_name** (*str*) –
- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

classmethod `apply_suggester_term` (*suggester_name*, *queryset*, *options*, *value*)

Apply *term* suggester.

Parameters

- **suggester_name** (*str*) –
- **queryset** (*elasticsearch_dsl.search.Search*) – Original queryset.
- **options** (*dict*) – Filter options.
- **value** (*str*) – value to filter on.

Returns Modified queryset.

Return type `elasticsearch_dsl.search.Search`

filter_queryset (*request*, *queryset*, *view*)

Filter the queryset.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **queryset** (*elasticsearch_dsl.search.Search*) – Base queryset.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Updated queryset.

Return type `elasticsearch_dsl.search.Search`

get_suggester_query_params (*request, view*)

Get query params to be for suggestions.

Parameters

- **request** (*rest_framework.request.Request*) – Django REST framework request.
- **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) – View.

Returns Request query params to filter on.

Return type dict

classmethod prepare_suggester_fields (*view*)

Prepare filter fields.

Parameters **view** (*rest_framework.viewsets.ReadOnlyModelViewSet*) –

Returns Filtering options.

Return type dict

12.8.1.2.7 Module contents

All filter backends.

12.8.1.3 django_elasticsearch_dsl_drf.tests package

12.8.1.3.1 Submodules

12.8.1.3.2 django_elasticsearch_dsl_drf.tests.base module

Base tests.

class `django_elasticsearch_dsl_drf.tests.base.BaseRestFrameworkTestCase` (*methodName='runTest'*)

Bases: `django.test.testcases.TransactionTestCase`

Base REST framework test case.

authenticate ()

Helper for logging in Genre Coordinator user.

Returns

pytestmark = [`<MarkDecorator 'django_db' {'args': (), 'kwargs': {}}>`, `<MarkDecorator`

classmethod setUpClass ()

Set up class.

class `django_elasticsearch_dsl_drf.tests.base.BaseTestCase` (*methodName='runTest'*)

Bases: `django.test.testcases.TransactionTestCase`

Base test case.

pytestmark = [`<MarkDecorator 'django_db' {'args': (), 'kwargs': {}}>`, `<MarkDecorator`

classmethod setUpClass ()

Set up class.

12.8.1.3.3 django_elasticsearch_dsl_drf.tests.data_mixins module

Data mixins.

```
class django_elasticsearch_dsl_drf.tests.data_mixins.AddressesMixin
```

```
    Bases: object
```

```
    Addresses mixin.
```

```
    classmethod created_addresses ()
```

```
        Create addresses.
```

```
        Returns
```

```
class django_elasticsearch_dsl_drf.tests.data_mixins.BooksMixin
```

```
    Bases: object
```

```
    Books mixin.
```

```
    classmethod create_books ()
```

```
        Create books.
```

```
        Returns
```

12.8.1.3.4 django_elasticsearch_dsl_drf.tests.test_faceted_search module

Test faceted search backend.

```
class django_elasticsearch_dsl_drf.tests.test_faceted_search.TestFacetedSearch (methodName='runTest')
```

```
    Bases: django_elasticsearch_dsl_drf.tests.base.BaseRestFrameworkTestCase
```

```
    Test faceted search.
```

```
    pytestmark = [<MarkDecorator 'django_db' {'args': (), 'kwargs': {}}>, <MarkDecorator 'django_db' {'args': (), 'kwargs': {}}>]
```

```
    classmethod setUp ()
```

```
    test_list_results_with_facets ()
```

```
        Test list results with facets.
```

12.8.1.3.5 django_elasticsearch_dsl_drf.tests.test_filtering_common module

Test filtering backend.

```
class django_elasticsearch_dsl_drf.tests.test_filtering_common.TestFilteringCommon (methodName='runTest')
```

```
    Bases: django_elasticsearch_dsl_drf.tests.base.BaseRestFrameworkTestCase,
```

```
          django_elasticsearch_dsl_drf.tests.data_mixins.AddressesMixin,
```

```
          django_elasticsearch_dsl_drf.tests.data_mixins.BooksMixin
```

```
    Test filtering common.
```

```
    pytestmark = [<MarkDecorator 'django_db' {'args': (), 'kwargs': {}}>, <MarkDecorator 'django_db' {'args': (), 'kwargs': {}}>]
```

```
    classmethod setUpClass ()
```

```
        Set up.
```

```
    test_field_filter_contains ()
```

```
        Test filter contains.
```

```
    Example:
```

```
        http://localhost:8000/api/articles/?state\_\_contains=lishe
```

test_field_filter_endswith ()

Test filter endswith.

Example:

http://localhost:8000/api/articles/?state__endswith=lished

test_field_filter_exclude ()

Test filter exclude.

Example:

http://localhost:8000/api/articles/?tags__exclude=children

test_field_filter_exists_false ()

Test filter exists.

Example:

http://localhost:8000/api/articles/?non_existent__exists=false

test_field_filter_exists_true ()

Test filter exists true.

Example:

http://localhost:8000/api/articles/?tags__exists=true

test_field_filter_gt ()

Field filter gt.

Example:

http://localhost:8000/api/users/?id__gt=10

Returns

test_field_filter_gt_with_boost ()

Field filter gt with boost.

Example:

http://localhost:8000/api/users/?id__gt=10|2.0

Returns

test_field_filter_gte ()

Field filter gte.

Example:

http://localhost:8000/api/users/?id__gte=10

Returns

test_field_filter_in ()

Test filter in.

Example:

http://localhost:8000/api/articles/?id__in=1|2|3

test_field_filter_isnull_false ()

Test filter isnull true.

Example:

http://localhost:8000/api/articles/?tags__isnull=false

test_field_filter_isnull_true ()

Test filter isnull true.

Example:

http://localhost:8000/api/articles/?null_field__isnull=true

test_field_filter_lt ()

Field filter lt.

Example:

http://localhost:8000/api/users/?id__lt=10

Returns

test_field_filter_lt_with_boost ()

Field filter lt with boost.

Example:

http://localhost:8000/api/users/?id__lt=10|2.0

Returns

test_field_filter_lte ()

Field filter lte.

Example:

http://localhost:8000/api/users/?id__lte=10

Returns

test_field_filter_prefix ()

Test filter prefix.

Example:

http://localhost:8000/api/articles/?tags__prefix=bio

test_field_filter_range ()

Field filter range.

Example:

http://localhost:8000/api/users/?age__range=16|67

test_field_filter_range_with_boost ()

Field filter range.

Example:

http://localhost:8000/api/users/?age__range=16|67|2.0

test_field_filter_term ()

Field filter term.

test_field_filter_term_explicit ()

Field filter term.

test_field_filter_terms_list ()

Test filter terms.

test_field_filter_terms_string ()

Test filter terms.

Example:

http://localhost:8000/api/articles/?id__terms=1|2|3

test_field_filter_wildcard ()

Test filter wildcard.

Example:

http://localhost:8000/api/articles/?title__wildcard=*elusional*

test_ids_filter()

Test ids filter.

Example:

`http://localhost:8000/api/articles/?ids=68|64|58` `http://localhost:8000/api/articles/?ids=68&ids=64&ids=58`

test_nested_field_filter_term()

Nested field filter term.

test_schema_field_not_required()

Test schema fields always not required

test_schema_fields_with_filter_fields_list()

Test schema field generator

test_various_complex_fields()

Test various complex fields.

Returns

12.8.1.3.6 `django_elasticsearch_dsl_drf.tests.test_filtering_geo_spatial` module

Test geo-spatial filtering backend.

class `django_elasticsearch_dsl_drf.tests.test_filtering_geo_spatial.TestFilteringGeoSpatial`

Bases: `django_elasticsearch_dsl_drf.tests.base.BaseRestFrameworkTestCase`

Test filtering geo-spatial.

pytestmark = [`<MarkDecorator 'django_db' {'args': (), 'kwargs': {}}>`, `<MarkDecorator`

classmethod `setUpClass()`

Set up.

test_field_filter_geo_bounding_box()

Test field filter geo-bounding-box.

Returns

test_field_filter_geo_bounding_box_fail_test()

Test field filter geo-bounding-box (fail test).

Returns

test_field_filter_geo_distance()

Field filter geo-distance.

Example:

`http://localhost:8000/api/publisher/?location__geo_distance=1km|48.8549|2.3000`

test_field_filter_geo_polygon()

Test field filter geo-polygon.

Returns

test_field_filter_geo_polygon_fail_test()

Test field filter geo-polygon (fail test).

Returns

test_field_filter_geo_polygon_string_options()

Test field filter geo-polygon.

Returns

```
test_field_filter_geo_polygon_string_options_fail_test ()
    Test field filter geo-polygon (fail test).
    Returns
```

12.8.1.3.7 django_elasticsearch_dsl_drf.tests.test_helpers module

Test helpers.

```
class django_elasticsearch_dsl_drf.tests.test_helpers.TestHelpers (methodName='runTest')
    Bases: django_elasticsearch_dsl_drf.tests.base.BaseTestCase
```

Test helpers.

```
pytestmark = [<MarkDecorator 'django_db' {'args': (), 'kwargs': {}}>, <MarkDecorator
classmethod setUpClass ()
test_filter_by_field ()
    Filter by field.
```

12.8.1.3.8 django_elasticsearch_dsl_drf.tests.test_ordering_common module

Test ordering backend.

```
class django_elasticsearch_dsl_drf.tests.test_ordering_common.TestOrdering (methodName='runTest')
    Bases: django_elasticsearch_dsl_drf.tests.base.BaseRestFrameworkTestCase
```

Test ordering.

```
pytestmark = [<MarkDecorator 'django_db' {'args': (), 'kwargs': {}}>, <MarkDecorator
classmethod setUpClass ()
    Set up class.
test_author_default_order_by ()
    Author order by default.
test_author_order_by_field_id_ascending ()
    Order by field name ascending.
test_author_order_by_field_id_descending ()
    Order by field id descending.
test_author_order_by_field_name_ascending ()
    Order by field name ascending.
test_author_order_by_field_name_descending ()
    Order by field name descending.
test_book_default_order_by ()
    Book order by default.
test_book_order_by_field_id_ascending ()
    Order by field id ascending.
test_book_order_by_field_id_descending ()
    Order by field id descending.
test_book_order_by_field_title_ascending ()
    Order by field title ascending.
```

test_book_order_by_field_title_descending()

Order by field *title* descending.

test_book_order_by_non_existent_field()

Order by non-existent field.

test_schema_field_not_required()

Test schema fields always not required

test_schema_fields_with_filter_fields_list()

Test schema field generator

12.8.1.3.9 django_elasticsearch_dsl_drf.tests.test_ordering_geo_spatial module

Test geo-spatial ordering filter backend.

class `django_elasticsearch_dsl_drf.tests.test_ordering_geo_spatial.TestOrderingGeoSpatial` (*methodNames=*

Bases: `django_elasticsearch_dsl_drf.tests.base.BaseRestFrameworkTestCase`

Test ordering geo-spatial.

pytestmark = [`<MarkDecorator 'django_db' {'args': ()}, 'kwargs': {}>`], `<MarkDecorator`

classmethod `setUpClass()`

Set up.

test_field_filter_geo_distance()

Field filter `geo_distance`.

Example:

<http://localhost:8000/api/publisher/?ordering=location|48.85|2.30|kmlplane>

12.8.1.3.10 django_elasticsearch_dsl_drf.tests.test_pagination module

Test pagination.

class `django_elasticsearch_dsl_drf.tests.test_pagination.TestPagination` (*methodName=*'runTest')

Bases: `django_elasticsearch_dsl_drf.tests.base.BaseRestFrameworkTestCase`

Test pagination.

pytestmark = [`<MarkDecorator 'django_db' {'args': ()}, 'kwargs': {}>`], `<MarkDecorator`

classmethod `setUpClass()`

Set up class.

test_pagination()

Test pagination.

12.8.1.3.11 django_elasticsearch_dsl_drf.tests.test_search module

Test search backend.

class `django_elasticsearch_dsl_drf.tests.test_search.TestSearch` (*methodName=*'runTest')

Bases: `django_elasticsearch_dsl_drf.tests.base.BaseRestFrameworkTestCase`

Test search.

pytestmark = [`<MarkDecorator 'django_db' {'args': ()}, 'kwargs': {}>`], `<MarkDecorator`

search_boost ()

Search boost.

Returns

classmethod setUp ()

test_schema_field_not_required ()

Test schema fields always not required

test_schema_fields_with_filter_fields_list ()

Test schema field generator

test_search_by_field ()

Search by field.

test_search_by_nested_field ()

Search by field.

12.8.1.3.12 django_elasticsearch_dsl_drf.tests.test_suggesters module

Test suggestions backend.

class django_elasticsearch_dsl_drf.tests.test_suggesters.**TestSuggesters** (*methodName='runTest'*)

Bases: *django_elasticsearch_dsl_drf.tests.base.BaseRestFrameworkTestCase*,
django_elasticsearch_dsl_drf.tests.data_mixins.AddressesMixin

Test suggesters.

pytestmark = [**<MarkDecorator 'django_db' {'args': () , 'kwargs': {}}>**, **<MarkDecorator**

classmethod setUpClass ()

Set up class.

test_nested_fields_suggesters_completion ()

Test suggesters completion for nested fields.

test_suggesters_completion ()

Test suggesters completion.

test_suggesters_completion_no_args_provided ()

Test suggesters completion with no args provided.

test_suggesters_phrase ()

Test suggesters phrase.

test_suggesters_term ()

Test suggesters term.

12.8.1.3.13 django_elasticsearch_dsl_drf.tests.test_views module

Test views.

class django_elasticsearch_dsl_drf.tests.test_views.**TestViews** (*methodName='runTest'*)

Bases: *django_elasticsearch_dsl_drf.tests.base.BaseRestFrameworkTestCase*

Test views.

pytestmark = [**<MarkDecorator 'django_db' {'args': () , 'kwargs': {}}>**, **<MarkDecorator**

classmethod setUpClass ()

Set up class.

test_detail_view()
Test detail view.

test_listing_view()
Test listing view.

12.8.1.3.14 Module contents

Tests.

class `django_elasticsearch_dsl_drf.tests.TestFacetedSearch` (*methodName='runTest'*)
Bases: `django_elasticsearch_dsl_drf.tests.base.BaseRestFrameworkTestCase`

Test faceted search.

pytestmark = [`<MarkDecorator 'django_db' {'args': (), 'kwargs': {}}>`, `<MarkDecorator`
classmethod `setUp()`

test_list_results_with_facets()
Test list results with facets.

class `django_elasticsearch_dsl_drf.tests.TestFilteringCommon` (*methodName='runTest'*)
Bases: `django_elasticsearch_dsl_drf.tests.base.BaseRestFrameworkTestCase`,
`django_elasticsearch_dsl_drf.tests.data_mixins.AddressesMixin`,
`django_elasticsearch_dsl_drf.tests.data_mixins.BooksMixin`

Test filtering common.

pytestmark = [`<MarkDecorator 'django_db' {'args': (), 'kwargs': {}}>`, `<MarkDecorator`
classmethod `setUpClass()`

Set up.

test_field_filter_contains()
Test filter contains.

Example:

`http://localhost:8000/api/articles/?state__contains=lishe`

test_field_filter_endswith()
Test filter endswith.

Example:

`http://localhost:8000/api/articles/?state__endswith=lished`

test_field_filter_exclude()
Test filter exclude.

Example:

`http://localhost:8000/api/articles/?tags__exclude=children`

test_field_filter_exists_false()
Test filter exists.

Example:

`http://localhost:8000/api/articles/?non_existent__exists=false`

test_field_filter_exists_true()
Test filter exists true.

Example:

`http://localhost:8000/api/articles/?tags__exists=true`

test_field_filter_gt ()

Field filter gt.

Example:

http://localhost:8000/api/users/?id__gt=10

Returns

test_field_filter_gt_with_boost ()

Field filter gt with boost.

Example:

http://localhost:8000/api/users/?id__gt=10|2.0

Returns

test_field_filter_gte ()

Field filter gte.

Example:

http://localhost:8000/api/users/?id__gte=10

Returns

test_field_filter_in ()

Test filter in.

Example:

http://localhost:8000/api/articles/?id__in=1|2|3

test_field_filter_isnull_false ()

Test filter isnull true.

Example:

http://localhost:8000/api/articles/?tags__isnull=false

test_field_filter_isnull_true ()

Test filter isnull true.

Example:

http://localhost:8000/api/articles/?null_field__isnull=true

test_field_filter_lt ()

Field filter lt.

Example:

http://localhost:8000/api/users/?id__lt=10

Returns

test_field_filter_lt_with_boost ()

Field filter lt with boost.

Example:

http://localhost:8000/api/users/?id__lt=10|2.0

Returns

test_field_filter_lte ()

Field filter lte.

Example:

http://localhost:8000/api/users/?id__lte=10

Returns

test_field_filter_prefix()

Test filter prefix.

Example:

http://localhost:8000/api/articles/?tags__prefix=bio

test_field_filter_range()

Field filter range.

Example:

http://localhost:8000/api/users/?age__range=16|67

test_field_filter_range_with_boost()

Field filter range.

Example:

http://localhost:8000/api/users/?age__range=16|67|2.0

test_field_filter_term()

Field filter term.

test_field_filter_term_explicit()

Field filter term.

test_field_filter_terms_list()

Test filter terms.

test_field_filter_terms_string()

Test filter terms.

Example:

http://localhost:8000/api/articles/?id__terms=1|2|3

test_field_filter_wildcard()

Test filter wildcard.

Example:

http://localhost:8000/api/articles/?title__wildcard=*elusional*

test_ids_filter()

Test ids filter.

Example:

<http://localhost:8000/api/articles/?ids=68|64|58> <http://localhost:8000/api/articles/?ids=68&ids=64&ids=58>

test_nested_field_filter_term()

Nested field filter term.

test_schema_field_not_required()

Test schema fields always not required

test_schema_fields_with_filter_fields_list()

Test schema field generator

test_various_complex_fields()

Test various complex fields.

Returns

class `django_elasticsearch_dsl_drf.tests.TestFilteringGeoSpatial` (*methodName='runTest'*)

Bases: `django_elasticsearch_dsl_drf.tests.base.BaseRestFrameworkTestCase`

Test filtering geo-spatial.

```

pytestmark = [<MarkDecorator 'django_db' {'args': (), 'kwargs': {}}>, <MarkDecorator
classmethod setUpClass ()
    Set up.

test_field_filter_geo_bounding_box ()
    Test field filter geo-bounding-box.
    Returns

test_field_filter_geo_bounding_box_fail_test ()
    Test field filter geo-bounding-box (fail test).
    Returns

test_field_filter_geo_distance ()
    Field filter geo-distance.

    Example:
    http://localhost:8000 /api/publisher/?location__geo_distance=1km|48.8549|2.3000

test_field_filter_geo_polygon ()
    Test field filter geo-polygon.
    Returns

test_field_filter_geo_polygon_fail_test ()
    Test field filter geo-polygon (fail test).
    Returns

test_field_filter_geo_polygon_string_options ()
    Test field filter geo-polygon.
    Returns

test_field_filter_geo_polygon_string_options_fail_test ()
    Test field filter geo-polygon (fail test).
    Returns

class django_elasticsearch_dsl_drf.tests.TestHelpers (methodName='runTest')
    Bases: django_elasticsearch_dsl_drf.tests.base.BaseTestCase
    Test helpers.

    pytestmark = [<MarkDecorator 'django_db' {'args': (), 'kwargs': {}}>, <MarkDecorator
    classmethod setUpClass ()

    test_filter_by_field ()
        Filter by field.

class django_elasticsearch_dsl_drf.tests.TestOrdering (methodName='runTest')
    Bases: django_elasticsearch_dsl_drf.tests.base.BaseRestFrameworkTestCase
    Test ordering.

    pytestmark = [<MarkDecorator 'django_db' {'args': (), 'kwargs': {}}>, <MarkDecorator
    classmethod setUpClass ()
        Set up class.

    test_author_default_order_by ()
        Author order by default.

    test_author_order_by_field_id_ascending ()
        Order by field name ascending.

```

test_author_order_by_field_id_descending()

Order by field *id* descending.

test_author_order_by_field_name_ascending()

Order by field *name* ascending.

test_author_order_by_field_name_descending()

Order by field *name* descending.

test_book_default_order_by()

Book order by default.

test_book_order_by_field_id_ascending()

Order by field *id* ascending.

test_book_order_by_field_id_descending()

Order by field *id* descending.

test_book_order_by_field_title_ascending()

Order by field *title* ascending.

test_book_order_by_field_title_descending()

Order by field *title* descending.

test_book_order_by_non_existent_field()

Order by non-existent field.

test_schema_field_not_required()

Test schema fields always not required

test_schema_fields_with_filter_fields_list()

Test schema field generator

class `django_elasticsearch_dsl_drf.tests.TestOrderingGeoSpatial` (*methodName='runTest'*)

Bases: `django_elasticsearch_dsl_drf.tests.base.BaseRestFrameworkTestCase`

Test ordering geo-spatial.

pytestmark = [`<MarkDecorator 'django_db' {'args': (), 'kwargs': {}}>`, `<MarkDecorator`

classmethod `setUpClass()`

Set up.

test_field_filter_geo_distance()

Field filter `geo_distance`.

Example:

`http://localhost:8000 /api/publisher/?ordering=location|48.85|2.30|km|plane`

class `django_elasticsearch_dsl_drf.tests.TestPagination` (*methodName='runTest'*)

Bases: `django_elasticsearch_dsl_drf.tests.base.BaseRestFrameworkTestCase`

Test pagination.

pytestmark = [`<MarkDecorator 'django_db' {'args': (), 'kwargs': {}}>`, `<MarkDecorator`

classmethod `setUpClass()`

Set up class.

test_pagination()

Test pagination.

class `django_elasticsearch_dsl_drf.tests.TestSearch` (*methodName='runTest'*)

Bases: `django_elasticsearch_dsl_drf.tests.base.BaseRestFrameworkTestCase`

Test search.

```
pytestmark = [<MarkDecorator 'django_db' {'args': (), 'kwargs': {}}>, <MarkDecorator
```

```
search_boost ()
```

Search boost.

Returns

```
classmethod setUp ()
```

```
test_schema_field_not_required ()
```

Test schema fields always not required

```
test_schema_fields_with_filter_fields_list ()
```

Test schema field generator

```
test_search_by_field ()
```

Search by field.

```
test_search_by_nested_field ()
```

Search by field.

```
class django_elasticsearch_dsl_drf.tests.TestSerializers (methodName='runTest')
```

Bases: *django_elasticsearch_dsl_drf.tests.base.BaseRestFrameworkTestCase*

Test serializers.

```
pytestmark = [<MarkDecorator 'django_db' {'args': (), 'kwargs': {}}>, <MarkDecorator
```

```
test_serializer_document_equals_to_none ()
```

Test serializer no document specified.

```
test_serializer_fields_and_exclude ()
```

Test serializer fields and exclude.

```
test_serializer_meta_del_attr ()
```

Test serializer set attr.

```
test_serializer_meta_set_attr ()
```

Test serializer set attr.

```
test_serializer_no_document_specified ()
```

Test serializer no document specified.

```
class django_elasticsearch_dsl_drf.tests.TestViews (methodName='runTest')
```

Bases: *django_elasticsearch_dsl_drf.tests.base.BaseRestFrameworkTestCase*

Test views.

```
pytestmark = [<MarkDecorator 'django_db' {'args': (), 'kwargs': {}}>, <MarkDecorator
```

```
classmethod setUpClass ()
```

Set up class.

```
test_detail_view ()
```

Test detail view.

```
test_listing_view ()
```

Test listing view.

12.8.2 Submodules

12.8.3 `django_elasticsearch_dsl_drf.apps` module

Apps.

```
class django_elasticsearch_dsl_drf.apps.Config(app_name, app_module)
    Bases: django.apps.config.AppConfig

    Config.

    label = 'django_elasticsearch_dsl_drf'
    name = 'django_elasticsearch_dsl_drf'
```

12.8.4 `django_elasticsearch_dsl_drf.compat` module

Transitional compatibility module. Contains various field wrappers and helpers for painless (testing of) Elastic 2.x to Elastic 5.x transition. This module is not supposed to solve all transition issues for you. Better move to Elastic 5.x as soon as possible.

```
django_elasticsearch_dsl_drf.compat.get_count(self, queryset)
```

Get count.

Parameters

- **self** –
- **queryset** –

Returns

```
django_elasticsearch_dsl_drf.compat.get_elasticsearch_version(default=(2, 0, 0))
```

Get Elasticsearch version.

Parameters **default** (*tuple*) – Default value. Mainly added for building the docs when Elasticsearch is not running.

Returns

Return type list

```
django_elasticsearch_dsl_drf.compat.KeywordField(**kwargs)
```

Keyword field.

Parameters **kwargs** –

Returns

```
django_elasticsearch_dsl_drf.compat.StringField(**kwargs)
```

String field.

Parameters **kwargs** –

Returns

12.8.5 `django_elasticsearch_dsl_drf.constants` module

Constants module. Contains Elasticsearch constants, lookup constants, functional constants, suggesters, etc.

12.8.6 `django_elasticsearch_dsl_drf.helpers` module

Helpers.

```
django_elasticsearch_dsl_drf.helpers.get_document_for_model(model)
```

Get document for model given.

Parameters **model** (Subclass of `django.db.models.Model.`) – Model to get document index for.

Returns Document index for the given model.

Return type Subclass of *django_elasticsearch_dsl.DocType*.

`django_elasticsearch_dsl_drf.helpers.get_index_and_mapping_for_model(model)`

Get index and mapping for model.

Parameters `model` (Subclass of *django.db.models.Model*.) – Django model for which to get index and mapping for.

Returns Index and mapping values.

Return type tuple.

`django_elasticsearch_dsl_drf.helpers.more_like_this(obj, fields, max_query_terms=25, min_term_freq=2, min_doc_freq=5, max_doc_freq=0, query=None)`

More like this.

<https://www.elastic.co/guide/en/elasticsearch/reference/current/query-dsl-mlt-query.html>

Parameters

- `obj` (Instance of *django.db.models.Model* (sub-classed) model.) – Django model instance for which similar objects shall be found.
- `fields` (*list*) – Fields to search in.
- `max_query_terms` (*int*) –
- `min_term_freq` (*int*) –
- `min_doc_freq` (*int*) –
- `max_doc_freq` (*int*) –
- `query` (*elasticsearch_dsl.query.Q*) – Q query

Returns List of objects.

Return type `elasticsearch_dsl.search.Search`

Example:

```
>>> from django_elasticsearch_dsl_drf.helpers import more_like_this
>>> from books.models import Book
>>> book = Book.objects.first()
>>> similar_books = more_like_this(
>>>     book,
>>>     ['title', 'description', 'summary']
>>> )
```

`django_elasticsearch_dsl_drf.helpers.sort_by_list(unsorted_dict, sorted_keys)`

Sort an `OrderedDict` by list of sorted keys.

Parameters

- `unsorted_dict` (*collections.OrderedDict*) – Source dictionary.
- `sorted_keys` (*list*) – Keys to sort on.

Returns Sorted dictionary.

Return type `collections.OrderedDict`

12.8.7 `django_elasticsearch_dsl_drf.pagination` module

Pagination.

`class django_elasticsearch_dsl_drf.pagination.LimitOffsetPagination(*args, **kwargs)`

Bases: `rest_framework.pagination.LimitOffsetPagination`

A limit/offset pagination.

Example:

`http://api.example.org/accounts/?limit=100` `http://api.example.org/accounts/?offset=400&limit=100`

get_facets (*facets=None*)

Get facets.

Parameters *facets* –

Returns

get_paginated_response (*data*)

Get paginated response.

Parameters *data* –

Returns

get_paginated_response_context (*data*)

Get paginated response data.

Parameters *data* –

Returns

paginate_queryset (*queryset, request, view=None*)

class `django_elasticsearch_dsl_drf.pagination.Page` (*object_list, number, paginator, facets*)

Bases: `django.core.paginator.Page`

Page for Elasticsearch.

class `django_elasticsearch_dsl_drf.pagination.PageNumberPagination` (**args, **kwargs*)

Bases: `rest_framework.pagination.PageNumberPagination`

Page number pagination.

A simple page number based style that supports page numbers as query parameters.

Example:

`http://api.example.org/accounts/?page=4` `http://api.example.org/accounts/?page=4&page_size=100`

django_paginator_class

alias of *Paginator*

get_facets (*page=None*)

Get facets.

Parameters *page* –

Returns

get_paginated_response (*data*)

Get paginated response.

Parameters *data* –

Returns

get_paginated_response_context (*data*)

Get paginated response data.

Parameters *data* –

Returns

paginate_queryset (*queryset, request, view=None*)

Paginate a queryset.

Paginate a queryset if required, either returning a page object, or *None* if pagination is not configured for this view.

Parameters

- `queryset` –
- `request` –
- `view` –

Returns

class `django_elasticsearch_dsl_drf.pagination.Paginator` (*object_list*, *per_page*,
orphans=0, *al-*
low_empty_first_page=True)

Bases: `django.core.paginator.Paginator`

Paginator for Elasticsearch.

page (*number*)

Returns a Page object for the given 1-based page number.

Parameters `number` –

Returns

12.8.8 `django_elasticsearch_dsl_drf.serializers` module

Serializers.

class `django_elasticsearch_dsl_drf.serializers.DocumentSerializer` (*instance=None*,
data=<class
'rest_framework.fields.empty'>,
***kwargs*)

Bases: `rest_framework.serializers.Serializer`

A dynamic DocumentSerializer class.

create (*validated_data*)

Create.

Do nothing.

Parameters `validated_data` –

Returns

get_fields ()

Get the required fields for serializing the result.

update (*instance*, *validated_data*)

Update.

Do nothing.

Parameters

- `instance` –

- `validated_data` –

Returns

class `django_elasticsearch_dsl_drf.serializers.DocumentSerializerMeta`

Bases: `rest_framework.serializers.SerializerMeta`

Metaclass for the DocumentSerializer.

Ensures that all declared subclasses implemented a Meta.

class `django_elasticsearch_dsl_drf.serializers.Meta`

Bases: `type`

Template for the DocumentSerializerMeta.Meta class.

```
exclude = ()
field_aliases = {}
field_options = {}
fields = ()
ignore_fields = ()
index_aliases = {}
index_classes = ()
search_fields = ()
serializers = ()
```

12.8.9 django_elasticsearch_dsl_drf.utils module

Utils.

```
class django_elasticsearch_dsl_drf.utils.DictionaryProxy(mapping)
    Bases: object
    Dictionary proxy.
```

```
class django_elasticsearch_dsl_drf.utils.EmptySearch(**kwargs)
    Bases: object
    Empty Search.
```

12.8.10 django_elasticsearch_dsl_drf.views module

```
class django_elasticsearch_dsl_drf.views.BaseDocumentViewSet(*args, **kwargs)
    Bases: rest_framework.viewsets.ReadOnlyModelViewSet
    Base document ViewSet.
    document = None
    document_uid_field = 'id'
    get_object()
        Get object.
    get_queryset()
        Get queryset.
    pagination_class
        alias of PageNumberPagination
    suggest(request)
        Suggest functionality.
```

12.8.11 django_elasticsearch_dsl_drf.viewsets module

Base ViewSets.

```
class django_elasticsearch_dsl_drf.viewsets.BaseDocumentViewSet (*args,  
                                                                **kwargs)  
    Bases: rest_framework.viewsets.ReadOnlyModelViewSet  
    Base document ViewSet.  
  
    document = None  
  
    document_uid_field = 'id'  
  
    get_object ()  
        Get object.  
  
    get_queryset ()  
        Get queryset.  
  
    pagination_class  
        alias of PageNumberPagination  
  
    suggest (request)  
        Suggest functionality.
```

12.8.12 Module contents

Integrate Elasticsearch DSL with Django REST framework.
